NEW PRESSGRIP™ TEFLON*-INSULATED TERMINALS

★ Terminal assembles from **major-diameter** side — easily, surely, quickly!

★ Lug seats against **major diameter** side of bushing assuring positive above-chassis height. Eliminates random UPS AND DOWNS inherent in other semi-assembled designs.

★ Installed terminal takes full advantage of natural Teflon memory — will not loosen due to Teflon relaxation.

The ultimate in semi-assembled terminals. Overcomes inherent problems of height misalignments and faulty installations. Easily tooled for, and automated in assembly. Ideal for non-chamfered, or chamfered holes. Really **GRIPS** in thin chassis materials. Sealectro maintains a complete line.... Write for complete specifications.

SEALECTRO PROGRAMMING DEVICES

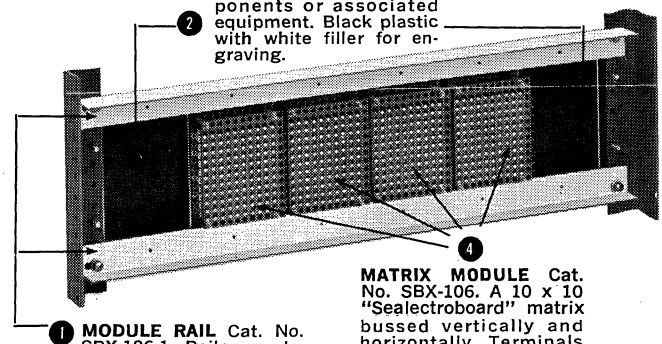
SEALECTRO PROGRAM SWITCHING

SEALECTROBOARD ™ MODULAR CORDLESS PROGRAM BOARDS *

"Sealectroboard" programming and switching provides complete ease and simplicity of operation with drastic reductions in hardware and space. The units consist of two decks of bussed contacts running at right angles to each other in the X and Y directions, forming an electrical matrix. A single shorting or component holding pin is used to complete the program circuit . . . move the pin to a new location and a new program function is generated.

The "Modular Sealectroboard" provides an extremely flexible means of program system expansion with a built-in appearance. The system consists of only four standard component assemblies, designed such that when installed in a standard E.I.A. 19″ relay rack, or bench cabinet, they result in a very attractive unit.

The "Modular Sealectroboard" can be expanded from a 10 x 10 hole matrix to a 10 x 60 hole matrix in one standard 5¼″ x 19″ rack panel. Additional panels can be added and interwired to expand program capacity as system requirements dictate.



BLANK PANEL Cat. No. SBX-106-2. Fills in unused width. May be used for mounting other components or associated equipment. Black plastic with white filler for engraving.

MATRIX MODULE Cat. No. SBX-106. A 10 x 10 "Sealectroboard" matrix bussed vertically and horizontally. Terminals are combination solder and Klip-on. Contact strips are silver plated.

MODULE RAIL Cat. No. SBX-106-1. Rails are designed for mounting on standard 19" relay racks. Offset is provided for flush panel installation. Mounting holes are provided for any combination (up to 6) of blank panels and "Sealectroboard" modules.

SIDE PLATE Cat. No. SBX-106-3. Provides end dressing, or return to relay rack frame.

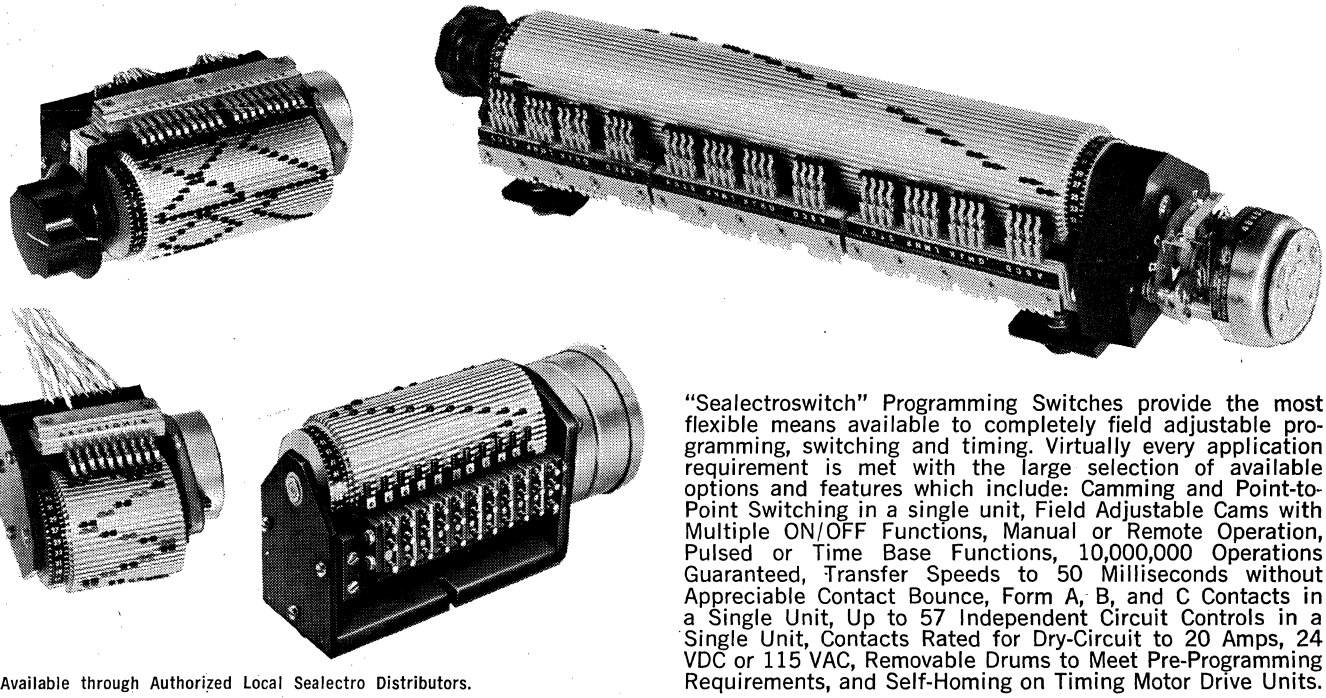
SEALECTROSWITCH™ FIELD ADJUSTABLE PROGRAMMING SWITCHES *



"Sealectroswitch" Programming Switches provide the most flexible means available to completely field adjustable programming, switching and timing. Virtually every application requirement is met with the large selection of available options and features which include: Camming and Point-to-Point Switching in a single unit, Field Adjustable Cams with Multiple ON/OFF Functions, Manual or Remote Operation, Pulsed or Time Base Functions, 10,000,000 Operations Guaranteed, Transfer Speeds to 50 Milliseconds without Appreciable Contact Bounce, Form A, B, and C Contacts in a Single Unit, Up to 57 Independent Circuit Controls in a Single Unit, Contacts Rated for Dry-Circuit to 20 Amps, 24 VDC or 115 VAC, Removable Drums to Meet Pre-Programming Requirements, and Self-Homing on Timing Motor Drive Units.

ELECTRONIC COMPONENTS

ARROW, HART & HEGEMAN "SNAP ACTING" MOMENTARY CONTACT SWITCHES

PRECISION SNAP-ACTING SWITCH A precision snap-acting switch is a mechanically operated electric switch having predetermined and accurately controlled characteristics, and having contacts other than the blade and jaw, or mercury type, where the maximum separation between any butting contacts is 1/8 inch.

MOMENTARY CONTACT SWITCH A momentary contact switch is a switch which returns from the operated condition to its normal circuit condition when the actuating force is removed.

ACTUATOR An actuator is the mechanism of the switch or enclosure which, when moved as intended, will operate the contacts.

OPERATING FORCE Operating force is that straight line force in the designated direction applied to the actuator to cause the switch contacts to snap to the operated contact position.

PRETRAVEL Pretravel is the distance or angle through which the actuator moves from the actuator free position to the actuator operating position.

OVERTRAVEL Overtravel is the movement of the actuator beyond the operating position.

MOVEMENT DIFFERENTIAL Movement differential is the distance or angle from the operating position to the releasing position.

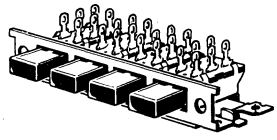
DW "MULTI-SWITCH"™ SERIES 65000



Rugged, versatile, multiple-station pushbutton switch requires only 1 1/16" depth behind panel. Overall switch height of 2 7/32" allows stacking in tight parallel rows. Three standard functions available: **Interlock**—actuating a button automatically restores to normal the button previously actuated; **Non-Lock**—each button has momentary action; **All-Lock**—all buttons, except release, lock when depressed. Standard on all interlock switches is a **Lock-Out** feature which prevents operation of more than one button at a time; this is also available on special order for non-lock and all-lock switches*. Single row assemblies are available from 1 to 12 stations with interlock or all-lock functions: up to 18 stations, non-lock. These switches utilize a specially-designed switching module consisting of a switch housing, pushbutton actuator, terminal board assembly and contactors. Features "U"-shaped, double-wipe bifurcated contactors for extra reliability. Silver-plated contactors rated 3 amps, 125 VAC, non-inductive; 0.5 amp, 125 VDC. Pushbutton, on 5/8" centers, is an integral part of plunger and cannot be lost or pilfered. Assemblies to 18 stations mount with only two #6 screws (not furnished). Frame notched to accept Tinnerman No. 7888-632-1 speed nuts with 6-32 machine screws (not furnished). Switches listed are fully assembled and factory-tested; have black pushbutton actuators and 2-C (DPDT) switch modules at each station. **Only the more commonly used switches are listed here; for complete engineering information, request Switchcraft Bulletin 174.**

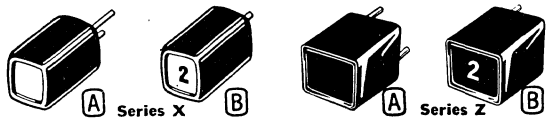
"GLO-BUTTONS" FOR "MULTI-SWITCH" SWITCHES SERIES X, Y, Z



Economy of non-illuminated buttons with the vivid color-legend display of illuminated buttons. "Glo-Buttons" look and function like an illuminated button, but require no lamp or power. Mount on all pushbutton switches with std. .050" x .187" plungers, as Switchcraft Series 7000, 8000, and 35000 "Multi-Switch", and other switches having maintained plunger action with a max. of 1/16" **fallback.** "Glo-Buttons" have a translucent front screen on which a legend is marked in an opaque color. The opaque color provides a background for the legend while the legend itself remains clear **(Figs. A).** An internal fluorescent illuminator is carried on a pusher which has two legs extending from the rear. When the button is depressed, the rear legs of the pusher bring the fluorescent illuminator flush with the screen which then lights up due to reflected ambient light, and projects a clearly visible legend, see **Figs. B.** All "Glo-Buttons" have black button housings and are available with std. legends: **"A"** thru **"Z"**, **"0"** thru **"50"**, and **"ON"**, **"OFF".** Eight basic types of buttons are offered: To order, specify part number and add suffix letter or numeral to part number which describes desired legend. Example: To order 1/2" sq. "Glo-Button" with black screen, orange-red illuminator and numeral "7", part number would read X21248-7.

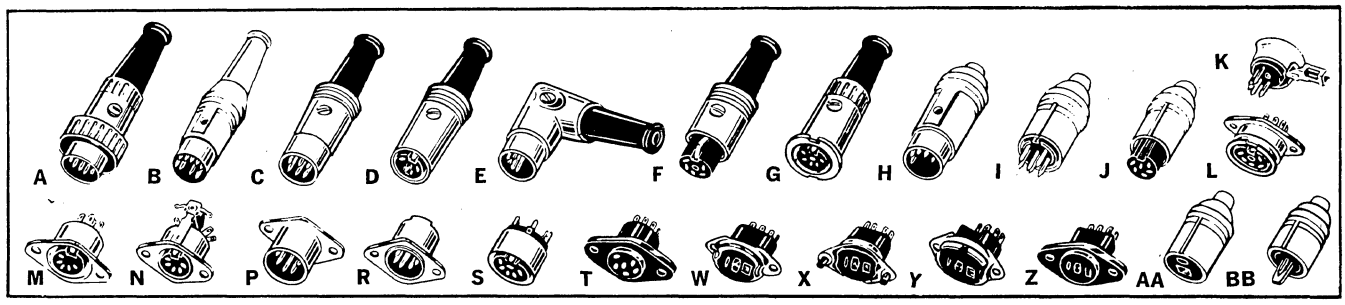
Audio Connectors



Here is the most complete low-cost family of miniature audio connectors available today. Exact replacements for plugs and receptacles used on most foreign built tape recorders, radios and dictation equipment. Switchcraft/Preh 2 to 7 contact connectors include male and female plugs and receptacles with bright nickel-plated shells and plastic snap-on shells. Check these outstanding features . . . lock-ring coupling, silver plated contact pins for low contact resistance, contact friction coupling for low mechanical interference noise, exclusive "automatic" grounding and polarization provisions. Thirteen receptacles offer some form of internal switching. Positioning "Ground Key-Rib" or "Ground Contact"—electrically integral with the connector shell—is provided in each plug and receptacle (except those with plastic housings or shells) to ground or shield the connector shell. Designed for low level circuitry, they have unlimited use in commercial, industrial, consumer and military applications.

PATCH CORDS, JACK PANELS AND TELEPHONE PLUGS: Audio, Broadcast, Miniature

TRIMM patch cords feature telephone type plugs on cords built to withstand hard use. Two or more conductors of bronze tinsel are covered with numerous layers of insulation and waterproofing. The cords are color coded, shielded (if desired) then covered with a final braid of nylon to assure long service. The nylon is standard black unless a color is specified. Available at a slight extra charge are: Blue (BL), Brown (BR), Green (GR), Red (RD), Slate Gray (GY) and White (WH).

"840" PATCH CORDS

Broadcast type "506" twin plugs at both ends. Conductors are wired to tip and the shield (when used) is connected to the grounded shaft. Commonly supplied with shield attached at one end only. Available without shield (W in code number), or with shield attached at both ends (X in code number). PP indicates the cord has a plug at both ends.

"841" and "851" SPACESAVERS

841 patch cords use two No. 517 triple circuit plugs of special broadcast design. The unique plug tip contour reduces "clicks" in service. Conductors are wired to tip and ring. Shield (if used) is wired to plug shaft. 851 patch cords use two No. 516 triple circuit plugs with standard ball tip construction. Both types commonly have shield connected at one end only.

Ordinarily supplied with jack ground lug offset (to reduce wiring time). Straight ground lugs are available to duplicate W.E. jacks. Types 96-71 through 96-77 are three circuit types for No. 516 or 517 plugs. Types 96-01 through 96-07 usually used with No. 506 twin plugs although other standard two-circuit plugs will fit.

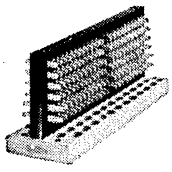
TERMINAL BLOCKS, TURN AND PUSH KEYS, LAMP SOCKETS: Related Panel Equipment



TERMINAL BLOCKS

Originally developed for telephone and telegraph exchange use, now are quite generally found in broadcast and microwave relay stations, large instrument systems —wherever very large numbers of circuits need convenient places of termination.

Terminals are of three basic types: standard solder types, wire wrap type, and hybrid wire wrap on one side, solder on the other. All are of 0.040" brass, tinlate plated. Standard solder type available in four different lengths with "butterfly" notched design assuring retention of wire. All blocks having numbering along the top row. Costs as shown are for standard solder lugs.

"421 SERIES"

Molded of black phenolic plastic material, including base. Provides 20 terminals per row, in two banks of ten, with up to ten rows. Base 6 1/16" long x 3" wide. Has steel mounting strip inset in groove in base, with standard mounting dimensions and accommodating #10-32 screws. Interchange with W.E. "L" series, as indicated by ( ) following TRIMM no.

Hole for #6-32 screw 3/8" off center provided. Entirely interchangeable with telephone type jacks, and essentially similar to W.E. "552" series. See table below for cross reference.

Knob of molded black nylon, has two flat areas on each side to provide convenience in turning. White filled line on front of knob readily identifies in which of two positions key has been turned.
Requires 2 23/32" depth behind panel.

Vector Socket, Terminal and Transistor Turrets simplify electronic construction. Faster wiring, greater component density and higher reliability are assured by their use. Transistor sockets accommodate 3-in-line or "top-hat" transistors. Commercial types have mica filled sockets, hot tin dipped steel saddles and XXXP phenolic turret posts with brass tinned terminals. Military types (premium grade) have MIL sockets with beryllium copper silver plated socket contacts, brass nickel plated hot tin dipped saddles and glass silicone turret posts with tinned brass terminals.

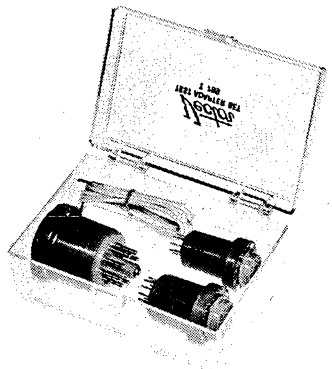
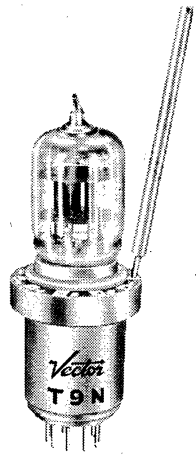
Vector TUBE SOCKET TEST ADAPTERS



T-789



T9N

TUBE SOCKET TEST ADAPTERS are ideal for making voltage resistance and wave form measurements from the tube side of electronic equipment. To use, insert adapter between tube and socket, and replace tube in adapter socket. Special test tabs are recessed on the adapter skirt and have a hole to grip test probe and protect operator's fingers during insertion and withdrawal. Regular alligator test-clipped probes also hold on tab and socket. Castings are low loss phenolic and fit all shield bases for miniature and noval type or into standard tube clamps. Reduced body diameter permits insertion into new telescoping shields. Adapter socket contacts are beryllium copper, silver plated for long life and low resistance. Electrostatic capacity between adjacent leads of the adapter is approximately 1 micro-micro-farad. Flash over voltage between adjacent terminals is in excess of 1500 volts DC.

Kit T789 consists of the three popular "must have" sizes, 7-pin miniature, 8-pin octal, 9-pin noval and a P1 probe in a handy clear plastic carrying case.

EXPERIMENTER'S TEST ADAPTERS SOCKET EXTENDERS

EXPERIMENTER'S TEST ADAPTERS. These are similar to the Socket Test Adapter but are less the shells and tabs so that connections can be cross-connected in any desired way. User must solder connections.

SOCKET EXTENDERS provide a replaceable unit for use in tube testers and expensive meters. Wear is shifted from the socket in the tester to the one in the extender. Sockets have beryllium copper silver plated contacts for long life. An all molded outside shell is used with socket leads soldered to plug pins.

EXTENDED TUBE SOCKET TEST ADAPTERS

For most work the short, unshielded adapters are adequate. For hard to reach locations or where surrounding equipment restricts use of regular test adapters, the 3 to 4 inch extended adapter may be used. In these the leads between plug and socket are individually shielded to minimize coupling. The shield is brought out to a lug on the wall of the adapter and should be connected to the chassis being tested. Capacity to shield is approx. 8 mmf. per lead.

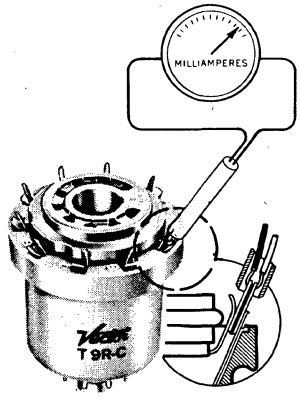
CURRENT TEST ADAPTERS



T9R-C
WITH P-2 PROBE

VECTOR CURRENT TEST ADAPTERS have two spring test tab elements for each pin. These test tab elements break the circuit when a dual-sided probe is inserted in test position. Probes are gripped by the test tabs and need not be held in position. Current is read at the meter where the two test leads are connected. The same test adapters and probe also permit voltage and wave form readings on any pin position, merely by connecting the leads jointly to the meter. The adapters have mica-filled shell and keyways, and may be used in a horizontal or vertical position.

INSULATED

INSULKRIMP®

INSULKRIMP® terminals and connectors incorporate all the advanced features of KRIMPTITE construction, plus the advantages of the permanently attached rigid vinyl plastic insulating sleeve. Up to No. 10 wire range basic barrel is Krimptite; size No. 8 and up uses Versakrimp (brazed seam) barrel. Replacing slower methods of individually insulating connection with tubing or tape, INSULKRIMP Terminals and Connectors are rapidly applied in a single application. The tough insulating sleeve is permanently attached and will not slip off, fracture, or unravel. In addition, INSULKRIMP construction affords increased vibration resistance due to its insulation supporting plastic sleeve. Operating Temperature Range: continuous duty from —40° to 220°F; intermittent duty to 300°F.

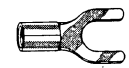
NYLAKRIMP®

Wire Ranges 8 thru 4/0 Has the same features as the Versakrimp except that it has a Nylon insulated sleeve. Nylon Sleeve ideal for high temperature applications.

AVIKRIMP®

AVIKRIMP® terminals are truly the ultimate in construction and performance. To all the VIBRAKRIMP features has been added the permanently attached and overlapping NYLON insulating sleeve — no extra insulation necessary. It provides extra barrel strength and insulation grip to resist high vibration plus heat-resistant pre-insulation. Color coded for rapid identification, these terminals are complete in themselves, needing only the proper wire and crimping tool. WALDOM offers many sizes and types with the maximum in reliability for your most critical applications. Operation Temperature Range: continuous duty from —40° to 250°F; intermittent duty to 350°F.

NON-INSULATED



KRIMPTITE®

KRIMPTITE® terminals and connectors are the most modern labor saving answer to your wiring problems. Functionally designed to make positive connections with a minimum of experience and time needed for application. Uniformly reliable connections can be made in a fraction of the time formerly required by less reliable and more costly methods. Available in a wide range of types and sizes to meet your every wiring need. Minimum ¼ inch barrel lengths are available in all terminals listed.

VERSAKRIMP®

VERSAKRIMP® terminals and connectors have all the advantageous features of the KRIMPTITE construction plus the universality and higher tensile strength afforded by BRAZED BARREL construction. The seam is bonded with a special silver brazing alloy, and cannot possibly pull open under any conditions of stress or wire pull. Capable of being crimped by a wide variety of crimp styles, a new freedom of selection is available for your needs. Crimping location is not critical, as the specially brazed seams are guaranteed not to split and may be crimped from any direction. Recommended for both stranded and solid wires.

VIBRAKRIMP®

VIBRAKRIMP® terminals are particularly suitable where high vibration is a factor and firm insulation support is required. The seamless annealed electro-tin plated brass sleeve adds over-all strength to the terminal construction while the "skirt" portion which extends beyond the barrel is crimped in the same operation as the barrel and the wire is permanently held, preventing creep. Insulation is anchored and any wire flexing takes place beyond the terminal.

BASIC TERMINAL CONSTRUCTION DETAILS

Made of pure electrolytic copper for highest conductivity (MIL QQC576). Annealed to flow freely under crimping pressure for best connection. Electroplated with pure tin for greatest corrosion-resistance, in accordance with the highest standards of the electrical industry and MIL-T-10727 (Ord.).

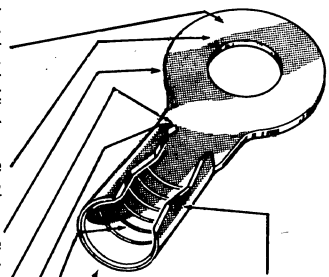
Modern construction from a single piece of metal gives greater strength, lower cost, uniform current flow for maximum conductivity.

All terminals and connectors have wire range clearly stamped on back.

The open-end design allows quick visual inspection of wire location before and after crimping.

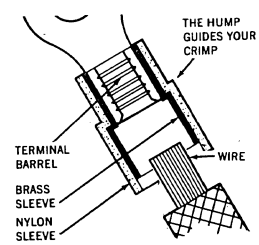
Strength gussets reinforce terminal where flat tongue has been formed into round barrel.

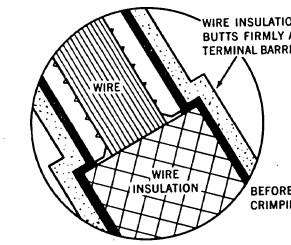
Multiple deep V-notches securely grip wire, provide best contact and maximum holding power over wide contact area.



Long barrel in all sizes eliminates loss of time finding a critical crimping location, eliminates squeeze-outs and shearing. Allows wider crimp for extra-strong, vibration-proof, moisture-tight connection with wide contact area.

Chamfered edge for faster, easier insertion of wire. Actually gathers frayed strands by funnel action.





"STEP" CONSTRUCTION GIVES EXTRA PROTECTION

Cutaway views of an AVIKRIMP barrel show how the "step" design for the brass sleeve acts to socket the wire insulation solidly in both the AVIKRIMP and VIBRAKRIMP styles for the ultimate in anti-vibration protection. In addition, the external "hump" marks the exact location of the barrel end — a quick guide to the target.

SOLID SILVER-BRAZED BARRELS

The barrel seam of the parts in Wire Ranges 8 thru 4/0 is closed with a 35% Silver Brazing Alloy to insure a solid one-piece barrel which will not open when crimped or under any stress or wire pull.

EXTRA WIRE-GRIPPING POWER

Specially designed indentations in the form of inverted truncated pyramids provide the interior of the barrels of all parts in Wire Ranges 8 thru 4/0 with extra wire-gripping power & greater contact area.

BENT TONGUES AVAILABLE

Terminal tongues can be bent to any angle for special applications. Although 90° and 45° angle bends are the most popular, we will form terminal tongues to your particular specifications.

Note: Large size INSULKRIMP* and NYLAKRIMP* parts have brazed barrels of VERSAKRIMP style.

FOLD-OVER SOLDERLESS TERMINALS

Designed to give a trim appearance to otherwise unsightly wire connections. They fold neatly over the stranding and confine it directly under binding screw or nut and automatically insure greatest possible contact. The cushion-like construction when closed permits binding nut or screw to sink into the soft copper and so serve the purpose of a lock nut and is therefore vibration proof. Each is adaptable to a wide range of wire sizes. For standard, extra flexible or solid wire.

RECTANGULAR TONGUE TERMINALS FOR TERMINAL BLOCKS

MIL-E-16366D (SHIPS) covers non-insulated brazed barrel rectangular tongue terminals. Insulated versions of these terminals are covered by MS-17143 (SHIPS). Since the Navy and AWG Wire Sizes, Tongue Width, Clearance, and Stud Size are identical for both Specifications, these common basic dimensions are in the center section of the chart below. The left and right sections of the chart list the individual Specification, the Waldom Part Number, Length, and the Maximum Wire Insulation Diameter (for MS-17143).

SOLDERLESS TERMINALS AND CONNECTORS

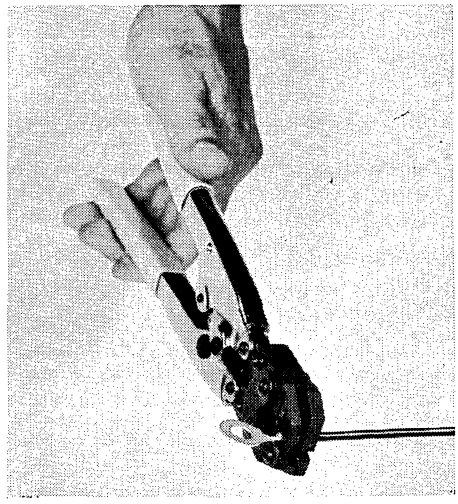
HAND RATCHET AND MAINTENANCE TOOLS

RATCHET TOOL

A precision production tool. Lighter in weight and easier to use than any similar tool. Unique pin-action gives greater mechanical advantage. The tool crimps even the heavier wires and terminals (up through #10 AWG) with a light squeeze. Tamper-proof ratchet mechanism is safe for fingers. The ratchet mechanism will not release until the crimping cycle is complete, but no extra effort is required for release and handles then open automatically. Precision-calibrated and crimp-tested at the factory to give perfect electrical connections every time.



MAINTENANCE TOOL

An ideal inexpensive multi-purpose maintenance tool. Handles wire sizes #22 through #10 AWG. Cuts and strips wires, crimps insulated and non-insulated termials and connectors. Proper leverage is provided to assure uniformly reliable results. Edges stay sharp. Quality hardened steel. Instulated handles.

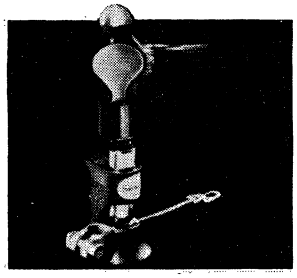
SELECTAKRIMP®

A New Tool for Crimping Both Small and Large Wire Range Terminal in Maintenance and Production Work

OUTSTANDING FEATURES

- Completely portable—easy to use
- Eliminates need for soldering large wires to terminals
- Replaces costly, permanently mounted crimping equipment
- "In-line" action assures uniform crimping
- Impossible to over- or under-crimp
- Low cost—yet lasts indefinitely

*Crimps #16 thru 4/0 wire range terminals



Here's the long-awaited answer to the problem of crimping large wire range terminals in maintenance and production work — without costly, permanently mounted equipment. The new Waldom "Selectakrimp" is a completely portable, easy-to-use tool. To operate, all you need is any conventional 2-lb. hammer to produce the closing pressure by striking the ram. An easy-to-read crimping scale prevents under-crimping. Over-crimping is prevented by unique design of the nest and indenter. Terminal being crimped is held securely in the nest by a strong, completely enclosed spring. Uniform, positive connection crimping is assuerd by the "in-line" ram action.

A single Selectakrimp tool can serve various departments, because its light weight (1¾ pounds) makes it easy to bring the tool to the work. Where production requirements call for simultaneous use in several locations, the low cost of Selectakrimp makes it economically feasible to have more than one in plant or shop.

Built to last indefinitely, the ram is made of specially heat-treated tool steel, and the base, of cast malleable iron. Base design prevents rocking of tool under closing pressures.

Part No. SKT-840 .....each $14.80

MAIN POWER SUPPLY

Input 115 V/AC, 60 cy. 0.25 amp. Transformed/rectified to 6 V/DC, maximum load 2.0 amp. The Supply is **Electrically Supervised,** so that a failure immediately sounds trouble alarms, and the System automatically transfers to Emergency Power, thus assuring continuity of fire protection. The Main Supply automatically returns when power is restored. Use #14 approved wire.

EMERGENCY POWER SUPPLY

6 Volt Battery: Burgess #4F4H; Eveready #706; or equivalent. Maximum load under alarm condition 2.0 amp. Obtain from local electrical or radio wholesale house.

CABINET

14" x 9" x 4". Gray Hammertone. Surface mount. Cylinder lock, 2 keys.

DETECTOR CIRCUIT

6 V/DC, 0.15 amp. Safety-Loop Circuit is **Electrically Supervised,** so that a wire break immediately sounds trouble alarms. Emergency circuits compensate for such fault (See N/E Switch), thus assuring continuity of fire protection. Maximum wire run 5000 ft. #FA-18/2 Approved Fire Detector Cable.

NORMAL/EMERGENCY SWITCH

Provides Emergency Operation:

(a) Compensates for wire break in Detector Loop. **permitting full response from all detectors** until repairs are made.

(b) Silences Trouble Buzzer, but maintains Red Lamp to show the emergency condition.

ALARM CIRCUITS

6 V/DC, maximum load 1.5 amp. If only one bell is used, it is **Electrically Supervised,** so that a failure immediately sounds trouble alarms. If two or more bells and/or #A-604 Annunciator are used, they are alternately connected to the two alarm circuits provided and the last operable alarm device is **Electrically Supervised.** Use #14 approved wire.

TEST/RESET/SILENCE SWITCH

Provides Simple Test Procedure:

(a) Test The System (once monthly)

(b) Silence all Firegongs.

(c) Reset to normal operation.

APPROVED FIRE ALARM SYSTEM

National Fire Codes Pamphlet 72A details the 'Local Automatic Fire Protective Signalling System' and its installation, acceptable to the Board of Fire Underwriters, and to Federal, State and Municipal authorities. This Standard is applicable to all industrial, commercial and military installations. Best practice throughout the country uses it in homes as well. Consult your Fire Chief.

Equipment bearing the UL Label has passed rigid inspection requirements and is of high professional quality.

Proper and correct tally of Automatic Fire Detectors is basic. The Code requires detectors in each room, hall, closet, stairwell, storage area, furnace room, basement, attic, loft, shaft, chute, etc. Do not exceed the space ratings given for each type of detector.

All wiring should be done in conduit as the best insurance for longevity and trouble-free service.

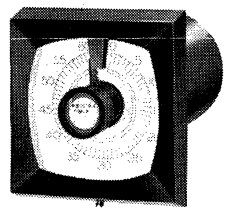
time delay timers

Three basic methods are employed to generate a Time Delay: synchronous motor, Thermal Bi-Metal, and electronic. The Series GTD, MTD, TD/CTD, H/CH, SF/CSF, TDAB, and Series RB generate the Delay function from a synchronous motor. This Delay is created by applying power to the timer motor/clutch circuit with a sustained switch closure (sustained is interpreted as simply being longer in length than the desired delay). When the timer receives power it begins a delay period, at the end of which occurs a switch operation. The load switch remains in the operated condition until power is removed from the timer, at which time the timer automatically resets.

In Models TD, H, MTD, SF, and RB in time cycles under 5 minutes a clutch/motor is used and the operating circuit is illustrated as "Circuit A".

In Models GTD, CTD, CH, CSF, TDAF and TDAB an external clutch is used to couple the motor to the timing mechanism during the time cycle. Model MTD above 30 seconds also is equipped with the external clutch, and this and the forementioned timers operate with the "Circuit B".

SERIES GTD



The Series GTD is an appearance engineered timer designed to compliment today's modern machinery. This unit provides a switch closure at the completion of a timed delay in an extremely wide selection of time cycles from 3 seconds to 60 hours or more. A clutching mechanism between the heavy duty synchronous motor and the load switch assures instant start, and immediate reset. Mounting is simple. A 3 inch hole in your panel is all that is required. A single screw under the flange of the timer face tightens a bracket against the edge of the panel hole.

As an optional feature the GTD can be supplied with a reverse clutching mechanism. This feature permits the unit to remain in the operate position if the control circuit is de-energized due to a power failure.

Load contacts are snap action SPDT, isolated. Contacts are rated at 10 amps. non-inductive. The GTD in available for 115/60, 115/50, 220/60 or 230/50. Other voltages available, contact factory.

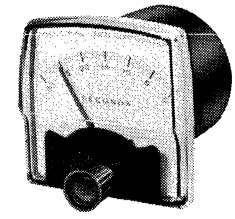
SERIES MTD



The Series MTD Time Delay Timer represents a new appearance concept for timing controls. This new timer is designed to match modern panel instruments, so commonly found on the finest automatic machines. The MTD features a rugged plastic face which protects the setting and progress indicators from dust and damage. When used alone or in conjunction with other instruments, the Series MTD will contribute to equipment appearance as well as performing its control function.

The control function of the Series MTD is one of providing a predetermined timed delay between the closing of one load circuit and the subsequent operation of the timer isolated load switch. The load contacts are 10 amp. SPDT snap action and are brought out to snap on terminals located at the rear of the timer. Mounting is through a 3" round hole in a panel and secured by means of a bracket screwed to the rear of the timer.

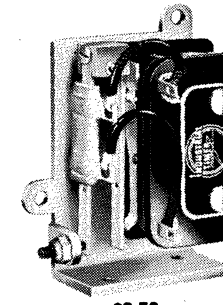
SERIES TH



$8.50

The Series TH is a thermally actuated snap action switch. The isolated load switch has a rating of 10 amps., non-inductive, and is totally enclosed. The timer is operated by the application of power to a resistor which in turn generates heat. The heat is transferred to a bi-metal strip which flexes against a switch actuator. The time delay occurs between the application of voltage to the resistor and the subsequent operation of the load switch. An additional bi-metal strip provides ambient temperature compensation. Reset time is from 2 to 4 times operating time, dependent upon model. Available in all voltages, AC and DC. Time Cycles—15 sec., 30 sec., 60 sec., 90 sec., 2 min., maximum.

programming cam timers

motors

Heavy duty synchronous motors, U/L and CSA approved. These motors are available in any of thirteen standard speeds. In cases where short time cycles are required of a higher torque motor is used. On the MC-O and RC-O Multi Cam Timers a High Torque motor is standard. These motors are built and guaranteed for long trouble-free performance.

switches

Single pole double throw snap action, U/L and CSA approved, totally enclosed. The switches are mounted on individual brackets, permitting removal of each switch without disassembling the entire switch bank. The switch contacts are rated at 10 amps non-inductive AC.

electrical characteristics

The Cam Timer Series can be supplied for 115 volt or 220 volt AC operation on 25, 50, 60 or 400 cycle frequencies. (As well as 6, 12, 24, & 30 volts DC)

gear rack assemblies

50 standard ratio gear and rack assemblies are stocked for changing overall time cycles on the Cam Timer Series. These assemblies may be changed by removing a 5/40 screw, setting the rack into the recess, and retightening the screw. Refer to chart for particular time cycle and gear rack assembly.

individual cam adjustment (series CM, MC, RC only)

Standard cam construction is such that the ON or OFF periods may be adjusted from 2% to 98% of the total time cycle. Cam adjustment consists of loosening the nut on the face of the plate, rotating the movable cam segment to the percentage of ON or OFF period desired, and then tightening the nut. The cams are made of corrosion resistant aluminum.

timing sequence (MC, RC only)

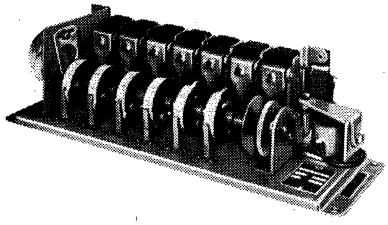
Each cam is individually mounted on the shaft by means of a heavy duty friction disc which allows easy finger adjustment of timing sequences. Individual positioning of the cam is also made possible without the use of set screws and wrenches, and permits rapid adjustment. On the Series MC and RC Multi Cam models a drum calibrated from 0% to 100% is mounted on each cam, this drum in conjunction with a mounted pointer acts as a guide when setting related programmed sequences; thus providing a reference point for use during the cycle.

ordering information

When ordering a Cam Timer please specify the following information:

1. Voltage and frequency of motor current.
2. Number of switches desired.
3. Time cycle selected from chart. (refer to motor number plus gear rack number. Example: MC4 Timer with C-12. Gear Rack.)

■ single cycle multi-cam timer



SERIES RC

The Series RC Timer is designed to provide a single timed electrical cycle upon momentary actuation from a remote position. The cam is a circular plate notched at one point in its circumference. Coincident with this notch is a small plate or a pawl. This plate is contoured to the periphery of the cam, and pressed against the cam face by a spring and a stud. Upon actuation, the relay mechanically disengages a lever from the cam notch, simultaneously starting the motor. During the revolution of the cam, the relay lever rides on the circumference of the cam. At the end of the revolution, the pawl guides the lever into the notch, stopping the motor after completing one revolution. The single switch handles the timer motor and the external load circuits, limited only by switch rating. The RC Multi Cam Timer operates from 1 to 20 additional circuits. This design enables the user to have all the advantages of the Series MC, plus single cycle homing control.

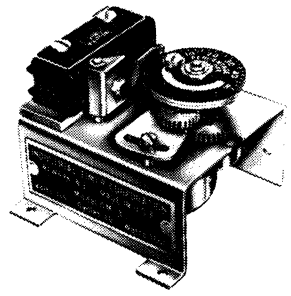
■ recycling timer



SERIES CM

The Series CM Timer repeats a continuous, adjustable ON and OFF electrical cycle. This timer consists of a heavy duty synchronous motor, adjustable cam, and single pole, double throw snap action switch, assembled on a base mount chasis. The cam is coupled to the motor by means of a simple gear and rack assembly, which can be changed by the user. Standard cam construction is such that the ON-OFF cycle may be adjusted from 2% to 98% of the total time cycle. The cam is calibrated in percentage for quick accurate adjustment. 50 stocked gear and rack assemblies are available for time cycles from 40 cycles (2/3 of a second) to 1 rev. in 72 hours.

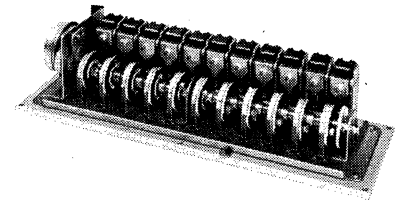
220/60 — **$21.50**

■ multi-cam recycling timer



SERIES MC

The MC Multi Cam Timer is identical in operation to the CM timer but controls from 2 to 20 circuits. The cams are mounted on a single driving shaft, coupled to the motor by a gear and rack assembly. Each cam is independently adjustable for 2% to 98% of the total time cycle. Individual cam adjustability enables the timer to be used as a programming device. The cams can be adjusted in any combination of timed sequences rapidly and easily. Total revolution time is determined by motor speed and the interchangeable gear and rack assembly.

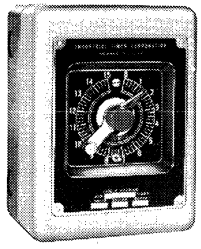
c- CYCLES s- SECONDS m- MINUTES h- HOURS

1. ORDERING INFORMATION — Model number selected from top of gear rack chart, gear rack, number of load switches, voltage and frequency.
   ALTERNATE ORDERING INFORMATION — Required time cycle (one complete rotation of cam shaft), number of load switches, voltage and frequency. Since some time cycles are available in 3 model numbers, the use of the ALTERNATIVE ordering information may expedite delivery by allowing us to ship model in stock with required time cycle.
2. Multi-switch cam timers requiring time cycles in shaded area may require high torque timing motor. This is due to increased torque encountered in rapid time cycles. To determine need of larger motor; multiply required time cycle in seconds by ⅔, the answer will be the maximum number of switches that can be operated with a standard timing motor. EXAMPLE: Time cycle 15 seconds. ⅔ x 15s = 10. 10 switches can be operated at 15 seconds with a standard timing motor, more than 10 load switches requires the use of a high torque timing motor. Because of torque requirements some RC0, MC0, RC1 and MC1 timers require the installation of a high torque motor. For RC0 and MC0 timers the high torque motor adds $27.50 to the price of the timer. For those RC1 and MC1 timers requiring a high torque motor add $29.50 — see formula*. If there is any question of when the high torque motors are required please contact the factory for advice.

INDUSTRIAL TIMER CORPORATION

interval timer

An interval timer closes its load circuit immediately upon the start of the time period. This circuit is closed (or opened) during the time that the timer is running for the pre-selected period. When this is completed, the load circuit opens and the timer automatically resets. Interval timers are designed to start from a momentary pulse. However, a sustained start circuit can be used. If the start circuit is still closed at the end of the time cycle, the load circuit will return to its normal position, but the timer will not reset until the start circuit is broken. At this time, the reset will occur and the timer is again ready for another cycle.



SERIES PAB (PAF)

The Series PAB Timer is an extremely accurate timing mechanism built to stand up under the hard usage and demanding standards that modern manufacturing processes require.

Due to the simplicity and reliability of a special clutching mechanism it is possible to offer the Series PAB with a range of timing from the PAB 1S with a 1 second overall range in 1/60 second increments, to the PAB 3H timer with a range of 3 minutes to 3 hours, calibrated in 3 minute steps.

The series PAF is similar in construction but is panel mounted.

SERIES PBM

pushbutton start

The Series PBM is an automatic reset, pushbutton operated Interval timer. The unit is panel mounted through a square hole, and secured with four screws. The PBM features extreme repeat accuracy and exceptional long life; both made possible through the use of a positive acting infinite engagement clutch which connects the switch actuator with the heavy duty synchronous motor. The unit also features an attractive glass faced dial with adjustment knob and start button combined in one assembly. Time interval or progress indication is located in the dial with a moving red pointer.

SERIES LVR

pushbutton interval

The Series LVR is a pushbutton Interval Timer specifically designed for OEM applications. This timer operates a set of 25 amp. SPDT contacts when the pushbutton is depressed and released, and opens the contacts at the completion of a pre-set time interval. The timer automatically resets and restarts when the pushbutton is again operated.

The timer is mounted through a panel with only the pushbutton and setting knob appearing on the panel. The dial of the timer would then be etched or affixed to the panel itself. Dials available on special order, please contact factory for details.

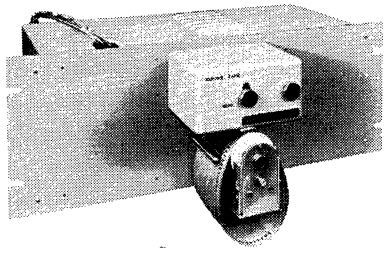
punched tape programmers

The programmers described in this Bulletin are designed to fill the need for a multi-circuit control device offering the flexibility of punched tape and a direct reading system that eliminates the requirement for elaborate memory devices, or special coding .

A unique method of reading and controlling load circuits is employed in these programmers. This method uses brushes which complete a load circuit through a hole in the tape. These brushes are so designed as to provide a "make before break" switch closure when two or more holes are read in a tape channel. This switch closure is sustained for as long as the channel is punched with successive holes.

The punched tape is driven by one of three methods: A synchonous motor, a stepping/fast advance drive, or a variable speed drive. Reading speeds as fast as 30 lines per second are available with one of these three drives.

Since the Tape Programmers are direct reading, the tape must be rugged, have a high insulation capacity, and eliminate static electricity. Hence a special rope paper/mylar laminate tape was developed which not only has the required qualities, but also has a surface texture that continuously cleans the brush ends, adding to the reliability of the system.



MODELS 012, 112, 122, 142, AND 182 — SYNCHRONOUS DRIVE

These tape readers are driven by a synchronous motor and offer many reading speeds ranging from 1 to 30 lines per second. A simple modification of this unit uses one channel for control of the synchronous motor so that the tape will make one complete circuit through the reading head and then home to a start position.

The Model 012 designates that the unit is mounted on a 6" x 6" panel. The Model 112 is mounted on a standard 7" x 19" rack panel.

MODELS 212, 222, 242, AND 282 — STEPPING/FAST ADVANCE DRIVE

The stepping drive advances the tape through the reader line by line upon receipt of a simple switch closure. Movement of the tape occurs instantly upon receipt of a 1/10 sec. or longer pulse. A sustained switch closure will advance the tape one position. Maximum standard stepping speed is 4 lines per second.

The stepping drive system also provides a fast advance which transports the tape at a speed of 15 lines per second. The determination of step or fast advance is generally made by punched holes in the tape, using one channel to signal the unit. (Please see wiring schematic.)

Note: The fast advance speed can be supplied on special order at rates other than 15 lines per second, or adjustable from a dial located on the panel.

MODELS 312, 322, 342, AND 382 — ADJUSTABLE SPEED DRIVE

This provides a solid state variable speed drive, adjustable from speeds from 1 to 30 lines per second in several ratios. Speed adjustment can be made while the equipment is operating. Additional speed ranges available; consult the factory.

READING METHOD

Make before break brushes (steel with hardened tips), to common drum.

1/4 amps, per channel, non inductive rated at 115/60.

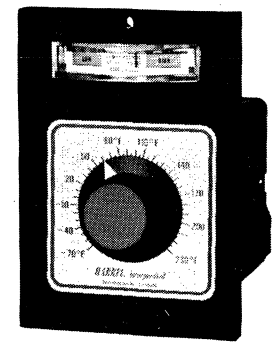
HARREL

PRECISION SOLID STATE TEMPERATURE CONTROLLERS

GENERAL

Harrel temperature controllers are intended for the precision temperature control of ovens, test fixtures, and all kinds of industrial machinery. They are arranged for easy mounting on any panel and are designed to require minimum panel space.

Temperature sensing is by means of a wire-type resistance sensor. This gives long-term stability and sensitivity which cannot be equalled by any other method of temperature sensing. The temperature sensor may be located as much as several hundred feet from the controller if desired. No special lead wires or shielding are required between controller and sensor.



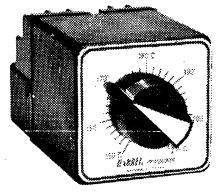
Indicating Controller

ON-OFF RELAY CONTROLLERS

Utilize a rugged, solid state amplifier controlling a 10-ampere relay. Relay is easily replaceable in the field.

TIME PROPORTIONING RELAY TYPES

Similar to regular on-off controller, but controller operates on a regular cycle of on to off and back again, and it is the **proportion** of on-to-off time which is varied to control the temperature. Gives a characteristic which approximates true proportional control and in general gives greatly improved performance over regular on-off controllers.



TRUE PROPORTIONAL TYPES

Completely solid state. No relays, contacts, or moving parts whatsoever in the power control circuits. Output does not cycle on and off but remains steady at exactly the amount necessary to hold the temperature at precisely the desired value. True stepless control gives closest temperature control of any type of controller. Elimination of contacts and moving parts means life measured in years.

* For on-off, temperature change at sensor to go from on to off and vice versa. For time proportioning, temperature change for 30% to 75% power output. For true proportional, temperature change from 10% to 80% full power output. Note that temperature performance for proportional types will in general be much better than figure shown; full proportional band is seldom required to compensate for changes in external conditions.

** At 25°C ambient temperature. Derate linearly to zero at 100°C ambient temperature. For indicating types, heater must be arranged so that steady state power output (that is the power other than during warm-up and cool-down) is between 5% and 75% of full power output.

INDICATING FORMS

The system of display employed on indicating forms of the controller is designed especially for automated systems. The temperature is both set and read out on the large easy-to-read dial. The indicator is separate, and is of the go/no-go type which gives a visual alarm whenever the actual temperature is not at the set point. No skill or knowledge is required of the operator. All he has to do is be sure that the indicator stays out of the two red zones. Indicating forms are mounted on an attractive escutcheon arranged for easy panel mounting or indicator may be located remotely if desired.

SENSORS

A number of different forms of sensors are available for the above

a. **Patch Sensor:** For measuring the temperature of surfaces. Thin and flexible; may be attached by means of an adhesive or with tape (supplied).

b. **Oval:** Sensors wound on oval hollow ceramic core. Bracket mount for sensing air temperature.

c. **Tubular:** Cylindrical sensors in aluminum or stainless steel protecting jackets. May be mounted in solids, liquids, or gases.

MALLORY SONALERT® Electronic Signals

The Sonalert electronic audible signal is a major advance in the signal warning field. The signal produces a penetrating sound of either 2800 Hz or 4500 Hz by purely electronic means. All circuitry is completely "solid-state" for maximem efficiency, lowest current requirement and extreme reliability.

Operating principles are quite simple. A transistorized oscillator drives a piezoelectric transducer to produce the desired tone. The characteristics of the transducer determine the output frequency and this cannot be changed by external means. Output volume is directly proportional to input voltage and ranges from 68 db at 6 VDC up to 80 db at 28 volts DC.

Because the circuitry is all solid-state, there are no points to arc and require maintenance. In addition, the signal produces no RF field. As a result, it may be used in computers where even the slightest amount of RF generation would upset delicate amplifiers.

The outstanding advantage of the Sonalert signal is that it operates on such low currents. In fact, the signal uses less current than a high-intensity neon indicator light. Because of this the signal is widely used to augment visual warning signals in computers and industrial process controls.

In the vast majority of cases no amplifier is needed to operate the Sonalert. Thus, it may be used with only simple probes to indicate water level when operated at 28 VDC. Indeed, it can even be used to give an indication of water hardness on a direct basis. Soft water does not have sufficient conductivity to "fire" the signal. As water becomes hard conductivity increases and the signal sounds.

The listing to the left shows all standard Sonalert signal models. The basic type is the SC628 which produces a 2800 Hz tone and operates on 6-28 VDC. The SC628H produces 4500 Hz. Types for 110 VAC operation are also shown. Several models are available which produce pulsating signals. The pulse rate is dependent on input voltage and varies from 3 cycles per second at 6 VDC up to 5 cycles at 28 volts. A special "warbler" model is also available (SC628W). This model is used in conjunction with a normal SC628H and produces a signal which warbles between the low 2800 Hz tone and the higher 4500 Hz tone.

There are no MIL specifications to cover the Sonalert per se. However, the signals are widely used in military and aerospace applications. A complete list of applicable MIL specs is presented in Bulletin 9-398 which is available from your Mallory distributor.

A 48 page booklet of Sonalert uses is available upon request. The booklet covers a host of uses ranging from auto through boat and home as well as industrial and laboratory. This booklet is available at your local Mallory Distributor or by writing to Mallory. Ask for Form 9-406.

Now, for the first time, a Solid State Power Control is available which is adaptable to a wide variety of applications by a simple turn of a screwdriver!

An internal trimmer allows the starting point of the control voltage of the Ohmitrol to be set anywhere within the stated trimmer voltage range. (This adjustment can be preset at the factory at small additional cost.

From the starting point to full line voltage, infinitely smooth control is obtained by means of the control knob. An "on-off" line switch actuated at the counterclockwise end of the control knob rotator is provided on all models.

Ohmite solid state power controls are the smallest 1 or 2 KW controls available and offer the advantages, not only of convenient size, but also of power savings, long life and low initial cost.

Two styles are available: the component style for panel mounting in equipment, and the lightweight, self-contained portable style. Portable units are completely self contained with grounded line cord and standard grounded AC receptacle.

Ohmitrol Controls are available with AC output and with two kinds of DC output delivered simultaneously. One kind consists of rectified DC, at approximately full line voltage; the other is the variable or controlled DC. This double output is useful, for example, for controlling shunt wound motors. Two-way terminals at the rear of the controls accept quick-connectors (push-on connectors), or can be soldered.

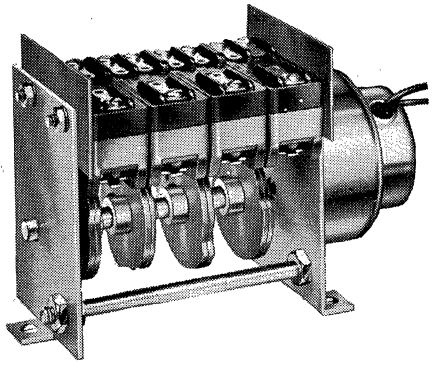
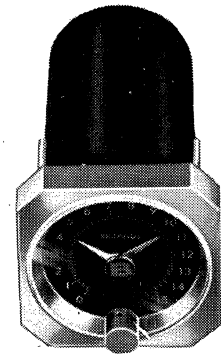
Versatility is the characteristic which design engineers need — and find — in Bristol Synchronous Motors and Timing Devices. Bristol's unusually broad experience and range of design and manufacturing skills are particularly valuable where special requirements must be met.

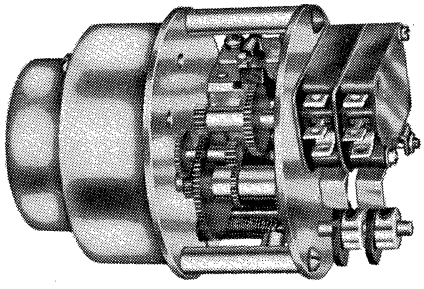
The devices shown are among the most widely used. All can be mounted in any position, and take a minimum of space. Materials are selected on the basis of their suitability to provide long service, and perform well under a variety of conditions. Bristol engineering service is available for applications that require custom design and manufacture.



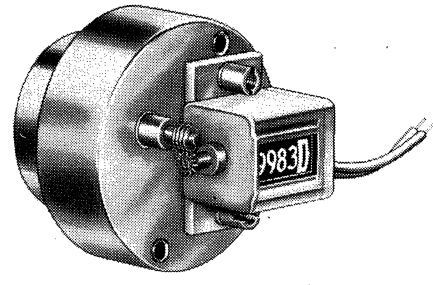
SERIES 31 REPEAT CYCLE TIMER. Low-cost multi-contact timer with high repeat accuracy. For vending machines, home appliances, industrial program controls. Switches: enclosed snap action SPDT type. Cams: dual cams with set screws for field adjustment. Cut cams available on special order. Bulletin B-22.
One Switch Model $8.25 approx.
Four Switch Model $16.75 approx.



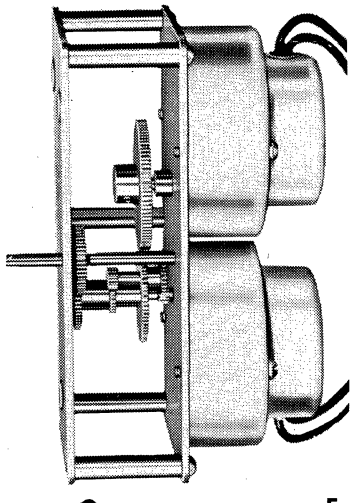
SERIES 6100 TIME DELAY RELAY. Universal Time Delay Relay provides self-holding solenoid starting with adjustable timed contact operation. Type 6110 provides three types of load contacts which give seven types of load circuit operation in a single unit. This model may be wired up to one of four basic types of operation: momentary start, automatic reset; momentary start, manual reset; sustained switching; and tandem or cascaded operation. Size 3" in diameter by 5 1/16 long. Timer case bezel 19/32 thick x 3 5/8 inches square. Universal mounting allows standard 3-stud or 4-stud panel mounting. For further information request Bulletin No. B-11.
$44.00 approx.



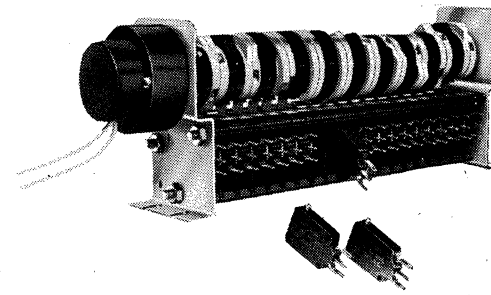
SERIES 21 TIME DELAY RELAY. General timer for instantaneous reset-type action, such as timers for photography, electronic safety, alarms, signals, etc. (Life expectancy over 1 million cycles.) Compact. Quick reset time (well under 1/5 second). Repeat accuracy better than 1% full scale. Time setting: 15 seconds to 3 months full scale. Rating: 10 amp (non-inductive load), Voltage: 115 V AC, 60 cycles standard. Optional adjustment feature available. Bulletin B-21.
One Switch Model $19.00 approx.
Two Switch Model $22.50 approx.



SERIES 41 ELAPSED TIME INDICATOR. Adaptable for panel or unit mounting, this low-cost series features simple installation, and a choice of four models with non-reset or reset counters. Maximum readings on both units from 9,999.9 minutes to 99,999 hours. 115 V AC, 60 Cycle standard. 50 Cycle and other voltages available. For further information on the three models above request Bulletin B-23.
Non-reset $14.00 approx.
Reset $20.00 approx.



MODEL 42 DUAL SPEED UNIT. Consists of two motors assembled to a common output shaft through a differential. Output speed is the sum of the two motor input speeds. Therefore, two different speed unidirectional motors provide a choice of 3 output speeds (either motor speed or the sum of the two motor speeds). Available with reversible motors for further variations in output speed. Standard units also available incorporating 3 and 4 motors providing up to 40 output speeds by electrical switching. Dimensions depend on the design of the unit in question. For further information request Bulletin B-24.
Basic Unit $18.75 approx.



SERIES 47 REPLACEABLE SWITCH REPEAT CYCLE TIMER is a multi-contact program timer which permits easy switch replacement without the necessity of disassembling. In addition one turn of the calibrated adjusting screw provides a 2% variation of cam time sequence. Switches are rated at 6 amps-115 volts. Available in a wide range of switches and speed combinations. Request Bulletin B-20
Two Switch Model $14.00 approx.
Six Switch Model $24.00 approx.

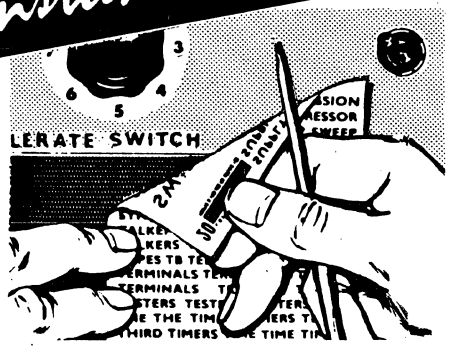
THE REVOLUTIONARY METHOD FOR MARKING ELECTRONIC EQUIPMENT

JUST RUB and it's PRINTED!

Sharp • Clean • Fast • Not a Decal • No Water • No Tapes



INSTANT LETTERING® marking kits bring you all the necessary elements for completely marking electronic equipment, prototypes, drawings, etc. in this fast new easy-to-use form. There's even a new drafting symbol kit for better more readable schematics.

Words, letters, numerals, switch patterns, arcs, drafting symbols, etc. are printed on a special transparent carrier film. Rubbing over one of these elements with a ballpoint pen releases it from the carrier film and adheres it to your working surface.

INSTANT LETTERING® words and symbols transfer to almost any surface including glass, plastic, even painted and bare metals. Now you can quickly mark all panels, even especially calibrated two-color nomenclatures, pilot light jewels, sub-assemblies, circuit boards, etc. Reproduction quality **INSTANT LETTERING®** transfers are clean and sharp, leave no background haze or film, make prototypes look like finished production equipment and give all equipment and drawings a professional look.

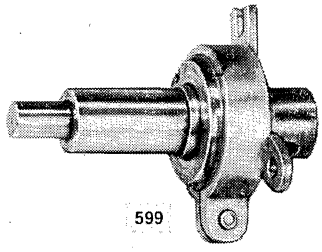
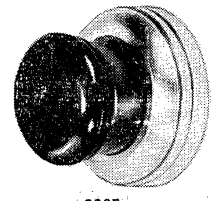
PLANETARY DRIVES



599



6665

Two ball-type planetary drive units are useful whenever a compact device is needed for reduced-speed operation of light mechanisms. These units depend on the action of steel balls that rotate between the knob shaft and a concentric sleeve that is attached to the driven instrument. The units are adjustable so that the pressure on the balls can be varied to match the operating load, this assures maximum smoothness while maintaining adequate torque. Maximum torque is 14 inch ounces; minimum torque is 10 inch ounces. The ratio is approximately 5 to 1, and two units may be used in tandem to produce a 25 to 1 ratio. These are precision devices for both military and commercial applications.

TWO-SPEED PLANETARY DRIVE

Permits slow speed operation at approximately 5 to 1; high speed at 1 to 1. The 6665 Dual Concentric Knob below fits this unit. Complete with mounting accessories.

TYPE IN MINIATURE L & Pi TUBULAR R.F.I. FILTERS

Aerovox type IN miniature L and Pi filters offer up to a 60% reduction in size over present industry standards with comparable ratings and performance.

The new miniature filters utilize conventional film paper dielectric which result in a capacitance change with temperature of ±5% from −55°C to +85°C and +15% to +125°C. The stability of the capacitance dielectric allows these filters to meet the minimum insertion loss specified over the complete temperature excursion - under rated load conditions.

This line is dual rated 185 VDC/115 VAC 0-400 Hz at 85°C and 150VDC/115 VAC 0-60 Hz at 125°C and will meet or exceed the applicable requirements of MIL-F-15733.

Concerning packaging, the new line offers one standard L and one standard Pi case size for all current ratings.

Inquiries are invited for filter designs to meet specific application requirements.

Complete technical information is contained in Bulletin NPJ-141.

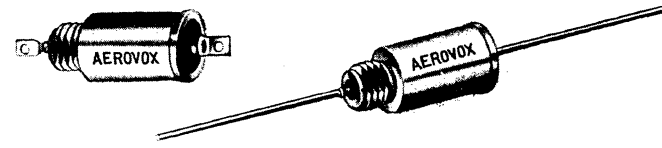
TYPE FC MINIATURE CERAMIC LOW-PASS R.F.I. FILTERS



Type FC miniature low-pass RFI filters meet or exceed applicable requirements of MIL-F-15733. They are available in working voltages of 28, 35 and 50 VDC at 125°C, 105°C and 85°C respectively, or equivalent AC peak. In addition, this series will withstand dielectric tests of 100 VDC at 25°C and has insulation resistance of 100 megohms minimum at 25°C.

These filters are supplied in hermetically-sealed silver plated cases and meet moisture resistance requirements of MIL-STD-202. Temperature cycling and immersion, vibration and attenuation also conform to MIL-STD-202.

All units are marked with Aerovox part number and working voltage.

Complete technical information is contained in Bulletin NPJ-140.

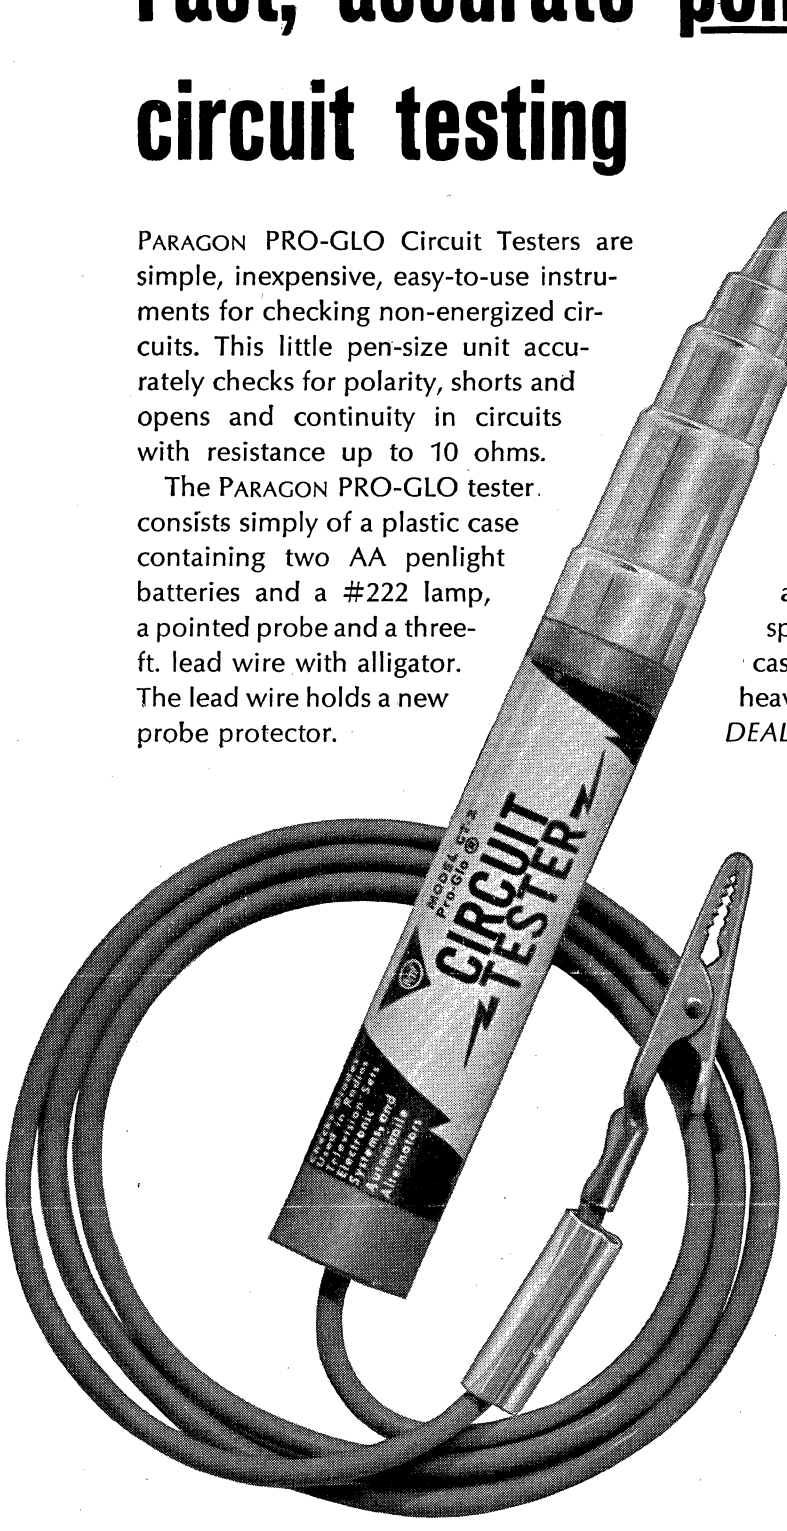
Fast, accurate point to point circuit testing

PARAGON PRO-GLO Circuit Testers are simple, inexpensive, easy-to-use instruments for checking non-energized circuits. This little pen-size unit accurately checks for polarity, shorts and opens and continuity in circuits with resistance up to 10 ohms.

The PARAGON PRO-GLO tester consists simply of a plastic case containing two AA penlight batteries and a #222 lamp, a pointed probe and a three-ft. lead wire with alligator. The lead wire holds a new probe protector.



Servicemen and home repairmen appreciate the ease of use of this simple tester. Signal light at point of contact eliminates necessity for shifting eyes to read meter. Speed and accuracy of testing is increased. Low cost of device makes it practical for mass distribution in large service centers. Long operating life is assured — probe and battery contact spring are tin-plated beryllium copper, case is high-impact plastic and wire is heavy-duty, flexible test lead.

RESISTANCE DECADES Model DR Series

High Precision and Stability — Low Zero Resistance — Long Life Switches

DR units provide convenient selection of precise resistance values. Typical applications are found in the areas of circuit design in simulation of various factors and as standard in bridge-type measurements.

Standard units are available with 3, 5, or 7-dials. Each decade inserts a precise ohmic resistance in series with the terminals. The basic ohmic value of any decade may be multiplied by factors of 0, 1, 2, 3, thru 10 by setting its dial at the appropriate step. Switches are 12 position, 360-degree type. Actual resistance is the sum of zero-resistance and indicated resistance. Model DR units provide zero-resistance of less than 0.003 ohm per decade.

DON'T SEND A MAN TO DO A BOY'S JOB!

Are the technicians in your laboratories and shops using expensive meters and instruments for sample continuity and voltage checks? Speed up production through the use of the tool specifically designed for this application. A meter should be used only when the value of voltage, resistance or current must be known. Under any other conditions a Circuitracer will provide the required information faster and easier than expensive, bulky meters.

CIRCUIT TESTING WITH A CIRCUITRACER IS FASTER because the signal light is in the tip at the point of contact. This makes it possible to determine the existence of a circuit or voltage without removing the eyes from the test point to read a meter.

SAVE METER REPAIR MONEY BY USING DESCO CIRCUITRACERS. An overvoltage across a meter usually results in extensive damage which takes the meter out of service until repaired or replaced. The worst that can happen to your Circuitracer is a burned out lamp that can be replaced by the operator in less than a minute. Total cost, ten or fifteen cents for the lamp!

*T.M. Reg.

The CIRCUITRACER is the only electrical tester (other than expensive meters) that can test dead circuits, low voltage live circuits AND high voltage live circuits. It is made of the finest materials available and is designed for long life.

DESCO TEST PROBE ADAPTERS

INSURE CONNECTOR RELIABILITY

Manual probing of harness connectors while circuit testing can damage connectors and impair reliability. Desco Test Probe Adapters were developed to provide a test fitting identical to the pins and sockets in the connectors being tested. They make the same electrical and mechanical contact as the mating connector, and insure against scratching, bending and warping.

The adapters are made in three sizes to fit connectors using #12, #16 and #20 wire gauges. The sockets are gold plated copper with a brass sheath which retains a beryllium copper spring. The pins are stainless steel to insure long life. All are made to rigid MIL-SPECS. The adapters will fit Desco Jumper Wires and the Desco Circuitracer* Tester interchangeably.

Several aircraft and missile manufacturers specify Desco Test Probe Adapters for most manual test connections. (names on request)

SATISFACTION UNCONDITIONALLY GUARANTEED

The Trantracer* checks continuity by sending less than 50 micro amperes (typically 20-40 micro amperes) through the circuits to prevent damage to solid state junctions and micro watt sensitive elements. Continuity is established as Go-No Go through circuit resistances of up to 400,000 ohms. Typically, the lamp brightness remains constant through test circuits from zero up to 100,000 ohms. The lamp dims at higher test circuit resistances, and is still giving bright indications at about 400,000 ohms circuit resistance. Maximum voltage applied to very high resistance circuits is 2 volts, low resistance circuits normally see millivolts and micro amperes.

INCREMENTAL INDUCTANCE BRIDGES

Direct in-line readings of inductance and conductance of iron core component at audio frequencies with or without superimposed direct current. The bridge uses the Owens circuit with provisions for measuring the series or parallel inductance and conductance of the unknown inductor; five precision resistance and capacitance decades are provided to indicate these values. "Q" or storage factor can be measured as the product of the inductive reactance and the conductance.

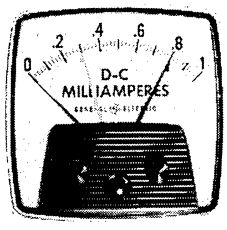
METER RELAYS

TYPE 195 AND 196 METER RELAYS

NEW IDEAS IN ELECTRONICS



TYPE 195

New General Electric Meter Relays feature a **solid-state, light-sensitive switch** for optimum control simplicity and reliability. This switch controls the load relay directly; no amplifiers, no pointer contacts . . . no mechanical interference with meter movement. Pointer travel is unrestricted across the entire scale . . . you get **continuous indication** above and below the setpoints! Control action is dependable and repeatable over entire range!

Unique **piggy-back control modules** on 3½-inch and 4½-inch models, eliminate mounting and wiring of separate components . . . speed up and simplify installation. Control mounts directly on rear of indicator; no soldering, no complicated connections . . . just plug-in and they're mated! Control module may be removed without interrupting measurement circuit.

Other features include **ON-OFF** (automatic reset) **or Alarm** (manual reset) **Control . . . 120-volt A-C Operation!** No special power supply needed . . . **Long Lamp Life!** Conservatively estimated at 5 years . . . **Fail-safe Operation.**

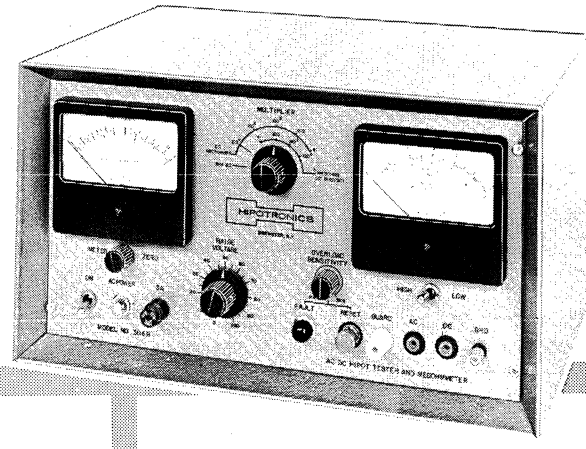
HIPOTRONICS AC/DC HIPOT TESTERS & MEGOHMMETERS

MODEL 306B



300 SERIES

The 300 series of Hipot Testers and Megohmmeters are voltage test sets which perform three different functions. They may be used for AC Hipot, DC Hipot and DC megohm tests. The "A" units perform IR tests to 1000 megohms and the "B" units to 100,000 megohms at 500 volts. Megohms at any other voltage may be determined from the volt and current meter readings.

- The sensitive thyratron operated overload relay adjustable from 20 microamperes to 5 milliamperes, will in many applications, permit non-destructive hipot tests to be performed.
- When the overload is set to 20 ua, the high voltage will generally trip on the build-up of leakage current before actual arc-over occurs.
- The "B" series has a quadruple range current meter which permits leakage currents as low as 0.01 ua to be read.
- The "A" series permits the reading of currents down to 1.0 ua.
- The KV meter has two ranges and is connected directly at the output for maximum accuracy.
- Other features include an AC input switch, fuse and pilot light, front panel output jacks, continuously adjustable output control, guard circuit on "B" series, and a failure light with reset button.
- Housed in a totally enclosed dust-proof cabinet.

Size: 17" W x 9½" H x 11" D
Input: 115 volts, 60 cps, 1 ampere – all models
Weight: 20 pounds

- Voltage to 6 KV, megohms to 100,000
- Overload adjustable from 20 microamperes to 5 ma.
- Performs non-destructive quantitative tests.
- continuously adjustable output from 0 to maximum
- Overload light with reset button, 2% meter accuracies

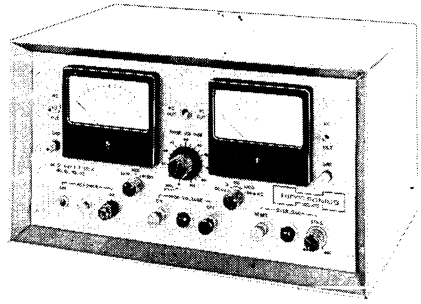
HIPOTRONICS NON-DESTRUCTIVE HIPOT & INSULATION TESTERS

NON-DESTRUCTIVE HIPOT TESTERS



Non destructive hipot tests may be made on many materials, components, test specimens etc. if a sensitive overload, coupled with a high speed HV cut-off is incorporated into an insulation tester. Hipotronics 100 series of hipot testers have a thyratron operated overload relay which cuts-out the HV in 5 milliseconds or less with leakage currents as low as 20 microamperes. The overload, when set on 20 ua, will generally trip the HV on corona and leakage currents which precede an actual breakdown, puncture or flash-over. The overload is continuously adjustable from 20 ua to 5 ma which enables the user to draw 5 milliamperes for capacitor charging, cable testing, power supply etc.

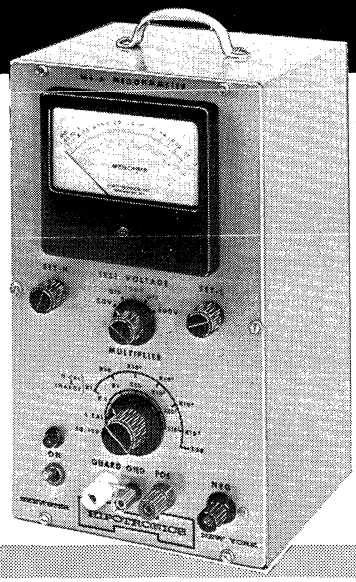
HIPOTRONICS MEGOHMMETERS

for production or laboratory testing of cables, capacitors, printed circuits, transformers, electronic assemblies, etc.



- The output voltages are both regulated with a ferro-resonant line and a solid state electronic regulator. Even with large capacitive loads on the 20 million range, there is no bounce.
- The indicating device is a high quality Weston with better than 2% accuracies on all ranges below 1 million and 3% on 10 million. The VTVM circuit driving the meter on the higher range models has no zero shift on any range.
- The short circuit protection is such that the output may be continuously shorted without injury to any component.
- Self contained calibrating resistors in the quadruple range models permit the operator to periodically verify the calibration.
- A three terminal output network (positive, negative and guard) permits grounded or ungrounded tests to be made.
- Dual color scale on multiple output voltage models improves readability.
- The units also contain a resistor and switch position for discharging both the internal and load capacitance.
- Available in 7 models, all with 115 Volt, 60 cps input and AC input switch, fuse and pilot light.

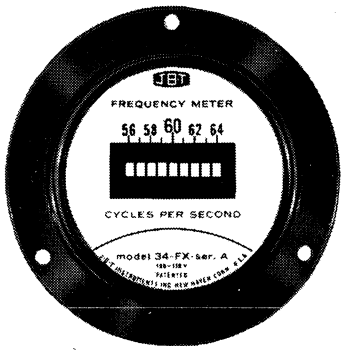
VIBRATING REED FREQUENCY METERS

J-B-T INSTRUMENTS, INC.

30th Year



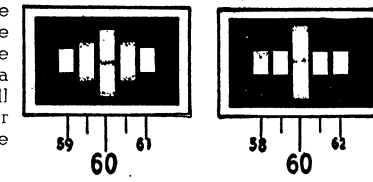
MODEL 34-FX-ser. A, a popular 9 reed meter, shown half actual size.

• **USES, Commercial and Military** — J-B-T Vibrating Reed Frequency Meters are used extensively in radio, telephone, television, and radar service, on engine-generator sets and standby equipment, in laboratories, in many types of aviation and electronic equipment, on panel and control boards, in inspection setups, and in high-cycle power sources — wherever constant or known frequency is important to accurate and efficient operation of equipment. Superior performance for commercial and military applications is assured by more than 27 years of continuous experience and know-how covering the design and complete manufacturing of hundreds of thousands of these instruments in our Connecticut plant. Current production incorporates several innovations covered by recent J-B-T patents.

• **ADVANTAGES** — At reference temperature of 77°F most models have guaranteed accuracy of 0.3% or better of the frequency being measured, but the tables that follow indicate that certain models may be ordered with accuracy of ±0.1%. Accuracy on interrupted DC may be somewhat less. High fatigue strength provides a safety factor for continuous operation. Temperature compensations are not required as frequency change per °F is only .0075%, negative. For example, a 50°F temperature rise causes a 60 cps reed to read only 0.2 cps lower than at reference temperature.

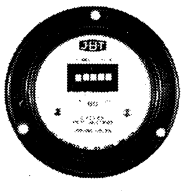
• **OPERATING PRINCIPLE** — The patented, simplified design used in the J-B-T meter operates on AC or interrupted DC. Each reed is adjusted to respond by resonance to the frequency shown on the dial. As the current excites the driving coil, the reed "in tune" with the frequency in the coil will respond by vibrating rapidly because of permanent magnet polarization and induced magnetism from the coil. The instrument is adapted to specified operating voltage by a series resistor. To determine frequency, simply read the reed.

• **RESPONSE PATTERNS** — Breadth of actuation differs with the increments of frequency between reeds. For example, at 60 cycles, half-cycle steps give the broad response shown below at left, whereas full cycle steps bring the sharp response at right. In general, the lower the frequency the greater the amplitude, the higher the frequency the less the amplitude. Thus a 25 cycle reed normally will have substantially greater amplitude than a 400 cycle or a 1000 cycle reed.

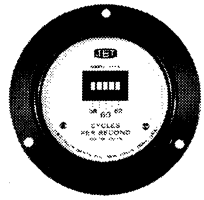


• **STABILITY** — All meters are permanently calibrated at the factory and do not require subsequent adjustment. J-B-T reeds have relatively high Q characteristics, an especially desirable factor in electronic circuits. Wave form or external fields do not ordinarily have an adverse effect. Built with no pivoted parts and with lock washers at every critical point, these rugged meters can take rougher treatment than many instruments.

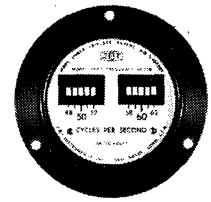
• **TRUST THE METER** — If a meter plugged in on a 60-cycle AC power line does not indicate exactly 60 cycles, trust the meter. Power supply may momentarily be off-frequency due to changing load conditions. All J-B-T Frequency Meters are meticulously calibrated at the factory, entirely independent of frequency of power supply. Production and inspection equipment are checked regularly against National Bureau of Standards frequency signals.



MODEL 21-FX, 5 reeds, matches other 2½" panel instruments.



MODEL 31-FX, 5 reeds, standard. For appearance when operating, see "RESPONSE PATTERNS," above.



MODEL 30-FX, 5 reeds in each of two frequency ranges.

VIBRATING REED FREQUENCY METERS

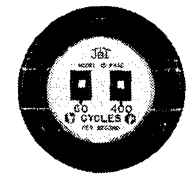
30th Year

J-B-T INSTRUMENTS, INC.

SEALED FREQUENCY METERS

FHXX TYPE Sealed meters, glass-to-metal construction, with solder terminals and detachable flange, supersede the former FHX sealed meters. While JAN-I-6, MIL-M-6B, and MIL-M-10304B (Type MR36) do not refer specifically to frequency indicators, the FHXX series uses the front mounting dimensions of these specifications, and meets or exceeds the sealing requirements, and for 3½" meters, electrical requirements, including 3000 volt breakdown. (1½" and 2½" meters meet 1000 volt breakdown.) Electrical characteristics and accuracy are the same as for corresponding F models without the HXX designation. Sampling procedure includes a test in water where the absolute pressure of the air above the water is reduced to 2.5 inches of mercury (approx. 57,000 ft. altitude) and is maintained for one minute. Available in 3½", 2½" and 1½" cases. For dimensions, see Table, Lines 1, 3 and 8. Standard voltage is 100-130.

MODEL 15-FHAC, 1½"; widely used as frequency standard for cathode follower circuit.



MODEL 21-FHXX, 2½"; 5 reeds, cased to match other 2½" panel meters.

REVISED DIAL APPEARANCE

Shipments during the life of this catalog may include meters with dials somewhat different from those pictured here. Dials are being steadily modified to use the revised trademark as adopted during J-B-T's Silver Anniversary Year. Many 3½" frequency meters also are carrying the designation Series A after the model number (as in the 34-FX-ser. A on preceding page). Such instruments have additional ruggedness and sensitivity, and unusually uniform amplitude over the entire span of the meter. However Series A are otherwise interchangeable as to mounting dimensions and circuit characteristics with other meters bearing the same model number.

RUGGEDIZED AND ILLUMINATED METERS

Model with "RUG" — Sealed vibrating reed frequency meters and sealed elapsed time meters are available, when so ordered, to the intent of MIL-M-10304B, covering ruggedization of other kinds of meters, and usually are specified only for extra-severe shock and vibration.

LL Construction — Requirements for lighted meter dials have led to illuminating the 3½" FHXX Series of sealed meters. Light from a source behind the panel is admitted through a sealed window built into the meter case. Inquiries are invited.

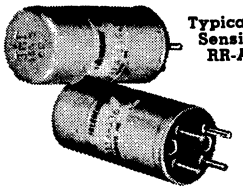
400 CYCLES, IN 1 CYCLE STEPS; 800 CYCLES

Among the variations which J-B-T produces on special order, are 21-reed, 390-410 cycles in 3½" case; and 11-reed; 780-820 cycles with 4-cycle increments. Quotations on request.

NOTE ON METER VOLTAGE

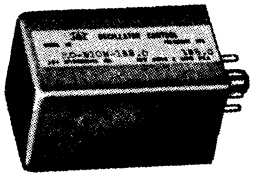
J-B-T Vibrating Reed Frequency Meters of all sizes normally are made with two studs and are designed to be connected across one phase of a multi-phase line. The single phase voltage where the meter will be used thus becomes the voltage to be specified for the meter. Special meters with extra studs are made for the purpose of using at two or more voltages, not additional phases.

RESONANT — REED RELAYS (Decoders) AND OSCILLATOR CONTROLS (Encoders)



Typical Frequency Sensitive Relays RR-A11A-136.5

Typical Sealed Oscillator Control RO-B10B-188.0



For technical description of J-B-T frequency-sensitive electromechanical control devices, see Bulletins 162R and D664A; for representative models and prices, see Section 5100 of this book.

New FG SERIES for Modern Design; Picture Window Frame Optional

FG FREQUENCY METERS. Thoroughly modern in appearance, the sparkling clear-plastic front and the bright textured metal insert below the dial add zest to any panel. FG meters not only match the 3½" wide x 3" high front of the New EG elapsed time meters on the next page, but are interchangeable as to mounting with other kinds of panel meters. Standard voltage is 100-130 volts; accuracy and electrical characteristics are the same as corresponding FX frequency meters in the table on preceding page. For example, Model 30-FG differs from Model 30-FX only in the case. FG mounting details appear in line 9 of the Table of Dimensions below and in Prints SK-160 and SK-164, available on request. Further design flexibility is provided by use of the half-bezel adapter sketched below, in which a black plastic picture window frame outlines a panel area 3.83" wide x 2.27" high . . . Three typical FG models are catalogued, but others are available on special order.

ELAPSED TIME & FREQUENCY TIME METERS

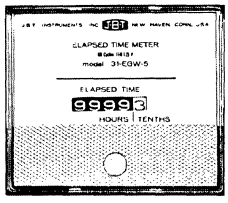
30th Year

J-B-T INSTRUMENTS, INC.

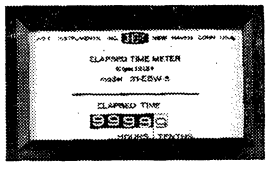
• USES AND ADVANTAGES OF ELAPSED (OR RUNNING) TIME METERS

To record operating time of AC electrical and electronic equipment, these self-starting synchronous instruments normally register in 1/10th hour steps to 9,999.9 or 99,999.9 hours, then automatically reset. They are widely used for tube life, TV equipment, punch presses, conveyors, oil burners, ground support equipment, maintenance schedules, etc. J-B-T engineers recommend the AC type of elapsed time meter for superior accuracy, especially where voltage or ambient temperature vary widely.

New EG SERIES for High Visibility; Modern Picture Window Optional



MODEL 31-EGW-5 for standard flush type mounting.



Same model with 13A-239 metal half-bezel.

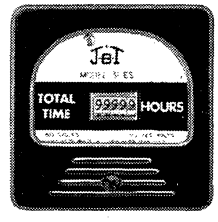
EG ELAPSED TIME METERS. These are designed to give a bright, jewel-like look to panels when used alone, in multiples, or in conjunction with other instruments such as the matching new FG series of frequency meters. A gleaming textured metal shroud below the dial and a clear-plastic case front 3½" wide x 3" high give high visibility to the numeral read out. Dimensions are same as line 9 for FG meters on opposite page. For optional picture window frame effect, on panel area 3.83" wide x 2.27" high, add preferred 13A-239 metal, or 13A-234 molded half-bezel adapter. (See panel cut-out and mounting detail drawing on preceding page.) The quiet, sturdy motors and extensively field-tested mechanisms of other J-B-T elapsed time meters are used in the EG series. Two models are catalogued. Other voltages, frequencies and numerals will be quoted.

31-EGW-5, (illus. at top) 5 wide digits, 0-9,999.9 hours, 60 cps, 110-125 volts ... **$21.50**

31-EGW 6 wide digits, 0-99,-999.9 hours, 60 cps, 110-125 volts **22.00**

13A-239 and 13A-234 half-bezel adapters, see opposite page.

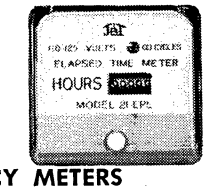
SQUARE-CASED ELAPSED TIME METERS



MODEL 31-ES. A square black molded case, matching other 3" x 3" meters, differentiates this model from the round 31-EX. Like 30-FS, Line 10 in Table on opposite page, except depth behind panel (B) is 2 1/32" and terminals are located on horizontal center line, each spaced ½" from the center (G). Variations can be made for 99,999 hours (suffix U), 230 volts, minutes, matte finish, or 50 cycles. Now supplied with tenths in red on white and units in white on black.

31-ES, 60 cy., 110-125 volts, 0-9,999.9 hours. **$18.75**

CLEAR PLASTIC ELAPSED TIME METERS

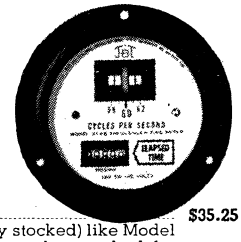


EPL TYPE. Clear-plastic to attaches to sturdy metal case with solder terminals behind panel. 21-EPL, (illus.) is 2 1/32" wide x 2 3/8" high with 2 1/8" meter barrel; 31 EPL is 3 1/32" x 3 3/32" with 2 1/16" barrel. Both 60 cy., 110-115 volts. See also EG Series, above.

21-EPL, 0-9,999.9 hours **$32.00**

31-EPL, 0-9,999.9 hours **34.00**

ELAPSED TIME — FREQUENCY METERS



31-FE SERIES. To conserve panel space and centralize information, this instrument combines elapsed time or running time meter with frequency reeds. The J-B-T design, proved by years of field experience, uses a separate exciting coil for the reeds to achive close control of reed amplitude and frequency. Reads 0-9,999.9 hours and 58-62 cy. with 5 reeds, at 100-130 volts; self starting. Tenths shown in red on white, all other numerals in white on black. *Black metal case with front mounting per Table of Dimensions, line 6. Power consumption is 4.7 watts. For variations having 7, 9, or 11 reeds, not regularly stocked, such as Model 34-FE, see print SK-45. Rev. D.

31-FE, 3¼" metal case 4-19/32" deep **$35.25**

31-FEX-1, (per print SK-44 Rev. F—not regularly stocked) like Model 31-FE, except with 3½" metal flange permanently attached for MIL-M-6B front mounting per line 7, Table of Dimensions **36.50**

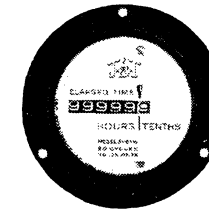
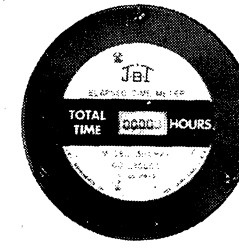
6-DIGIT WIDE-NUMERAL ELAPSED TIME METERS



MODEL 31-EXW. One of the most easily-read and most versatile of J-B-T elapsed time meters is Model 31-EXW, illustrated. Easy-to-read, wide numerals register to 99,999.9 hours then automatically reset. Distinctive contemporary dial shows tenths in red on white and units in white on black. This model is interchangeable, electrically and mechanically with Models 31-EXW-5 and 31-EX. The black molded case is also interchangeable with all 3½" FX types of frequency meter. Print SK-125 Rev. E gives mounting information.

31-EXW, 6-digits, 0-99,999.9 hours, 60 cy., 110-125 volts **$18.00**

3½" SEALED ELAPSED TIME METERS — 60 Cycles



MODEL 31-EHXX. Where rugged requirements make a completely sealed elapsed time meter desirable, this glass-to-metal construction with flat glass front and 3½" diameter separable flange, often is specified. Heavy-duty solder terminals are supplied. Every instrument is checked in a vacuum chamber. Overall dimensions and appearances match the FHXX series sealed frequency meters. Maximum voltage between terminals and case, 1,000 volts, R.M.S. The meter registers in 1/10 hour steps to 9,999.9 hours, then automatically resets. Tenths indicator is red on white, all others in white on black. Mount according to SK-85, Rev. C.

31-EHXX, 60 cy., 110-125 volts.... **$20.75**

3½" SEALED ELAPSED TIME METERS — 400 Cycles

MODEL 33-EHXX. This stable, self-starting 400-cycle elapsed time meter is extensively used for preventive maintenance and for reliability testing and checking in a wide variety of equipment. The instrument is entirely enclosed in a 3½" flanged case, glass-to-metal sealed construction with separable flange; heavy-duty solder terminals; flat glass front. 1/10 hours are shown in red on white, all other numerals white on black. The external appearance matches FHXX frequency meter series. For dimensional details see SK-61, Rev. B.

33-EHXX, 400 cy., 0-9,999.9 hours, 1/10 hour steps, 110-125 volts **$78.00**

2½" SEALED ELAPSED TIME METERS

MODEL 21-EHXX. A full size counter reading 9,999.9 hours in 1/10 hour steps and a rugged self-starting synchronous motor are built into this 2½" sealed meter. Its front mounting dimensions are the same as Type MR26 electrical indicating instruments in MIL-M-6B. Glass-to-metal seal makes the instrument completely tamper-proof. Ask for Print SK-68, Rev. G. (2½" 400-cycle meter, **Model 23-EHXX** also is made on special order per Print SK-178.)

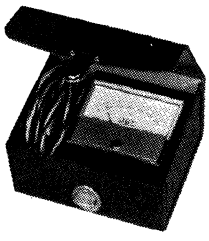
J-B-T TEMPERATURE TESTERS AND ACCESSORIES

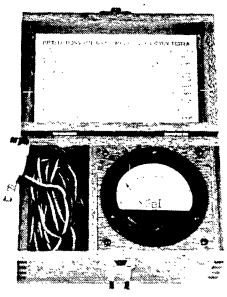
J-B-T INSTRUMENTS, INC. 30th Year

FOR APPLIANCE SERVICING, QUALITY INSPECTION, AND LABORATORY SET-UPS

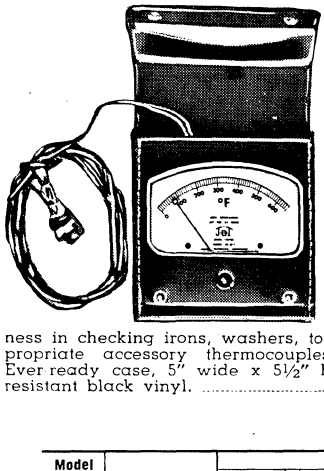


OVEN OR HEAT CHAMBER TESTERS

MODEL 23-JP-1. This popular portable indicating pyrometer saves time and furnishes reliable information in testing and setting thermostats on electric or gas ranges and other appliances by showing oven temperatures as they change. 0-650°F. dial with 2⅜" scale arc is covered by clear-plastic front (may be shipped as rectangular instead of round as illustrated). Sturdy, pliable, scuff-resistant black case is 4½" x 2⅞" x 4¼". Characteristic of more expensive pyrometers, the 23-JP-1 is automatically compensated for ambient temperature. Thus the tester eliminates calculations, avoids likelihood of serious error, as temperature changes inside the instrument itself, and gives reliable direct readings. Supplied with attached SA-116, 5½' calibrated thermocouple, clip, and convection shield **$30.00**

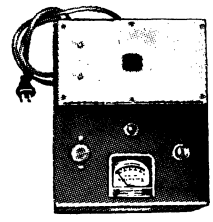


MODEL 32-JP-3. This time-tested model has an instrument-type carrying case of natural finished mahogany 6⅛" x 3⅞" x 4½" over hardware. The glass-covered indicator shows 0-650°F. range in 10° divisions readable to 2½° on a 2⅜" scale arc. Exceptionally fast, continuous response. Automatic compensation for ambient temperature is a valuable feature whether the tester is used for service work, sales demonstrations, or inspection. Attached SA-116, 5½' thermocouple, clip for affixing to grill and convection shield included **$32.50**



MODEL 32-JP-7. This model is recommended as the most versatile and easiest to read of this J-B-T series. The 0-650°F. scale is more than 4" long. Automatic compensation for ambient temperature is included, so that temperatures are read directly and without calculations. The 32-JP-7 also provides color-coded external binding posts. These permit quick attachment or interchanging of various J-B-T thermocouples placed in one or more of the heat zones to be checked. An SA-116 5½' thermocouple with attachment clip and convection shield is supplied and is left attached when the tester is carried. For maximum usefulness in checking irons, washers, toasters, clothes dryers, etc., use appropriate accessory thermocouples. Tester price includes stitched Ever-ready case, 5" wide x 5½" high x 2¾" deep, of sturdy, scuff resistant black vinyl. **$35.00**

IRON TESTER



MODEL 32-JIT. Self-contained bench-type tester; checks all makes of irons; measures thermostat temperatures; shows open or short circuits. Automatically compensated for room temperature. Also indicates operating temperature of the sole plate (working surface) on non-electric or cordless irons. Black metal base; overall size 10" x 12" x 5½", scale 0-650°F, 15 amp fuse, 6' cord, 110 volt, 50-60 cycles. **$38.50**

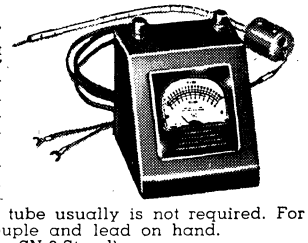
Requires one standard flashlight cell, replaceable in the field. Temperature accuracy ±2% of full scale; rectified AC readings ±5%. Accessories as listed may be added for testing appliances. Includes two SA-162 resistance bulbs, two SA-116 thermocouples, electrical leads, and AS-TR-2 built-in transformer. **$135.00**

MODEL 61-JRT (LESS TRANSFORMER). Same unit, same scales except no reading in amperes; AS-TR-2 transformer omitted. **$120.00**

AS-TR-2 Transformers for use with Model 61-JRT to provide readings of two current ranges: 0-30 and 0-60 amp. AC **$19.00**

HEAT INDICATORS



MODEL 32-J PYROMETER IN SN-7 STAND. Mounted in sloping front black metal stand, 4¼" high x 4⅜" deep x 4⅛" wide. Compensated for ambient temperature. Medium resistance system, damped for quick reading on 2⅜" scale, assures ruggedness and pointer stability. For ±2% accuracy, use only the type and resistance of thermocouple and lead provided; if extra length—coil it—to maintain calibration. A protection tube usually is not required. For convenience keep an extra thermocouple and lead on hand.

WV-503A
240-Volt Power Line Monitor

The RCA WV-120A and WV-503A Power-Line Monitors are designed for use by industries, laboratories, and radio-TV appliance repair shops where it is important to know the power-line voltage at all times. These instruments provide a continuous, accurate indication of the ac line voltage without the inconvenience of handling probes and switches or the necessity of selecting one of several scales to select the proper meter reading.

Used in conjunction with a variable isolation transformer, they are a valuable aid in selecting line voltages for TV and appliance servicing, test equipment calibration, and the operation of electronic equipment that requires a known line-voltage supply.

Both instruments feature:

- **Expanded 2-Color Scale (WV-120A . . . 100-140V; WV-503A . . . 200-240V).**
- **High Accuracy — ±2% center scale; ±3% Ends of scale.**
- **True RMS Reading — Moving vane type meter gives accurate RMS readings, even when line-voltage is not pure sine wave.**
- **Fast Meter Action — Reveals "bounces" and fluctuations in line-voltage.**
- **Wide Frequency Range — From 25 to 400 Hz.**
- **Large Numerals, Large Pointer, Large Scale — Provides easy reading from a distance.**
- **Convenient Wall Mounting — Mounting holes in rear of case.**

WO-33A SUPER PORTABLE OSCILLOSCOPE (Kit or Wired)

The WO-33A 3-inch Oscilloscope is the "all purpose" scope. All the bandwidth you need for servicing color-TV, video broadcast monitors and cameras; and for square-wave testing of audio and ultrasonic equipment. All the gain you need for low-level audio work — servicing pickups, microphones, preamps; plus signal-tracing radios, amplifiers — trouble shooting communications signaling systems, ham radio and hi-fi equipment, industrial electronics machinery and other applications.

With vertical amplifier in narrow-band position, sensitivity is 3 rms millivolts/inch; bandwidth within —3 db, 20 Hz to 150 kHz. Wide band position: sensitivity 100 rms millivolts/inch; bandwidth within —3 db, 5.5 Hz to 5.5 MHz. MODEL 550 SERIES (metal case) RIMLESS ROUND TYPE

MODEL 850 (actual size) ZERO ADJUSTER OPTIONAL

Manufactured in SHURITE'S new Connecticut plant, Shurite meters are attractive, rugged, dependable instruments with accuracy well within ±5%, and the ability to duplicate readings. DC meters are polarized-vane solenoid type (moving-magnet or bridge-type construction where indicated); AC meters are double-vane repulsion type with jeweled bearing. The jewel construction costs more to build, but it pays off in continuing accuracy during a longer useful life. Models 550 and 950 fit 2-5/32" hole; Model 850 fits 2-5/32" to 2-1/32" hole. All are guaranteed.

***NEW PRODUCTS** — More sensitive meters which retain high torque-to-weight ratio without sacrifice of ruggedness, include: *A) three 0-500 DC Microammeters, 1000 ohms int. res.; *B) 0-1 DC Milliammeter, Stock No. 8336, 1000 ohms int. res., with bridge-type design to minimize effects of external magnetic forces; and *C) 0-2 DC Milliammeter, Stock No. 8835, 500 ohms int. res. A handy new Cold-Zone Tester priced at less than $21.00, and a pocket type Lighting Level Indicator, calibrated for 0-300 foot candles, are listed on the opposite page.

†Simpson VU meters meet all the Electrical and Ballistic specifications established by Bell Laboratories and American Standards Association as required by broadcasting, communication and sound engineers. They are available with either type A or B scales. Type A scale stresses the level in VU for monitoring wire lines. Type B scale stresses per cent use of transmitter output and is the standard for broadcast service. Impedance is 3900Ω @ "0" VU deflection.

Simpson stackable edgewise panel meters

Simpson's new miniature edgewise panel meter has a unique Self-Shielding core magnet movement* that eliminates the need for the protruding barrel that is prevalent in other edgewise meter designs. It lends itself to a design that is sharp, modern, extremely compact and with a meter scale that extends nearly to the full width and height of the meter. An optimum scale display area allows for the use of large, easy-to-read numerals on a horizontal plane.

CALIBRATION AND DIALS—All DC meters listed below have the Simpson self-shielding movement. (Calibration not affected by stray magnetic fields or magnetic mounting). All AC meters have the Simpson Iron Vane type movement. AC Ammeters and Milliammeters are calibrated for use on 25 through 800 Hz. AC Voltmeters are calibrated for use on 25-125 Hz. Calibration at frequencies up through 800 Hz. can be made. Contact your local Distributor for prices.

Wattmeters listed below have the Simpson dynamometer movement calibrated for either magnetic or non-magnetic panels and for a frequency range of 25-125 Hz. Standard wattmeters ±2%, compensated wattmeters ±3%.

Simpson elapsed time indicators

Widely used by research labs, manufacturing plants, and broadcast stations . . . to keep life and performance records based on operating time. Models 55ET and 57ET match standard 3½" Simpson meters. New model 105 has modern appearance, with clear lucite cover. New DC model 106 gives accurate (±2%) time readouts where synchronous AC power is not available. Model 106 withstands ambient temperatures from —40°C to +65°C (—40°F to +149°F).

Models 105 and 106 manufactured in West Germany.

AVERAGE SENSING, TRUE RMS & DC SEGMENTAL INSTRUMENTS

Segmental Voltmeters and frequency meters make it possible to measure very small changes in input conditions.

The significant portion of the overall voltage or frequency range is expanded to occupy the full scale length. Thus, only that segment of the range that is important appears. In addition to the standard expansions and accuracies shown, special segmental voltmeters can be built on order. Write the factory for a quotation.

The A.C. segmental voltmeters are available in either average sensing or true R.M.S. sensing units. When working with sine wave currents or when other measurements will be made with average sensing equipment, the average sensing meters are preferred.

When working with distorted waveforms, as would be encountered in constant voltage transformers, S.C.R. circuits, D.C. to A.C. solid state inverters or similar equipment, the true R.M.S. sensing meter would probably be preferred.

THERMOCOUPLES

Stack thermocouples are iron-constantan, calibrated to 5 or 10 ohms ±1% per table.

Types 21221 and 21224 are iron constantan thermocouple wire in a stainless steel overbraid for rugged service application where flexing or abrasion would cause deterioration of standard thermocouples.

Types 21222 and 21223 are iron-constantan thermocouples with a glass cloth overbraid. These thermocouples are suited for most general purpose use or for permanent mounting in protected sheaths or conduit.

Contactless Meter Relays

Maximum reliability design

Intended for control, alarm, and limit applications — with utmost dependability. Photoconductor sensing eliminates all interference with the indicating meter. High gain transistor switch circuit provides solid state reliability, accurate switching, and extremely small dead band. Control points are adjusted from the front panel thru a gear drive. The solid-state switching circuit triggers internal 10-ampere DPDT relays (one for each control point). Ideal for unattended operation, they can be obtained from stock in a wide selection of ranges, with either dual or single control points, and in three sizes.

Contact Type Meter Relays

Model 29XA
for alarm control or limit applications on equipment designed for unattended applications

Contact making types are well suited to most general purpose applications in which cost and reasonable reliability are primary considerations. The contacts are the non-locking type and may be positioned along the scale arc by an external, front adjusted gear drive. Styling and mounting dimensions are designated as the Model 29XA.

NEW PROTECTED 260-5P AC/DC VOLT-OHM-MILLIAMMETER

This instrument has built-in Meter and Tester protection approaching 100% which virtually makes this VOM "GOOF PROOF." The 260-5P will be of particular value where the instrument may be used by inexperienced people; students, apprentices, and new employees. Technicians, too, will find the instrument ideal for exploring unfamiliar equipment, especially when lack of a schematic diagram poses the hazard of encountering unexpected high voltages.

Combined protection not found in any other VOM.

1. Reset button pops out to indicate overload.
2. Circuits cannot be reset while overload is present.
3. Massive overloads which can cause hidden damage are not required to activate the protective circuit.
4. All ranges are protected except those not feasible in a portable instrument — 1000 and 5000 volts DC and AC; 10 Amps DC.

The 260-5P has the same ranges and takes the same accessories as the Simpson 260-5 VOM.

Complete with test leads 7500 and operator's manual.

Model 383A CAPACOHMETER®

IN-CIRCUIT Capacitor Leakage Tester

"ONE PACKAGE FLEXIBILITY"

- Measures the leakage resistance of defective paper, mica, or ceramic capacitors
- Indicates directly the capacitance of good paper, mica, or ceramic capacitors over a range of 10.0 pf to 10.0 mf

A pulse technique detects many marginal capacitors. All measurements are made under load conditions. No adjusting of a bridge circuit and balancing controls. Borderline capacitors which cause costly "call backs" are detected immediately with the pulse test.

Line Voltage: 105/125v, 60 Hz.
Shipping Weight 12 lbs.
Complete with test leads and operator's manual **$139.00**

MODEL 1699

This instrument was designed to measure low values of resistance accurately, rapidly, and at low cost. It compensates for the shortcomings of the conventional ohmmeter in the area of low-resistance measurement, while retaining the ohmmeter's simplicity of operation.

The Model 1699 Milliohmmeter determines the value of an unknown resistance by comparing it with a known standard internal resistance.

In low resistance measurements, the contact resistance of the meter probes and the resistance of the test leads become significant sources of error. These errors are avoided by using test leads terminating in Kelvin Clips coupled with a unique circuit which has separate current and voltage paths. This results in ±1% of full scale accuracy — even on the 0-0.05 ohm range.

1700 SERIES

These standards are designed for long-term accuracy under maximum usage. Spring-loaded sapphire jewels and hardened pivots insure high shock resistance and minimum friction. A high damping factor, added to high torque, provides rapid response to input level variations and minimizes overshoot.

The combination of a self-shielded, deep-core movement and a steel case makes these instruments impervious to most external magnetic fields found in industry.

These standards use a knife-edge pointer and mirror scale to eliminate parallax errors.

A large-diameter, ceramic rotary switch with solid silver contacts provides range-change in Models 1700, 1702, 1703 and 1704 so that only two binding posts are necessary. On the Model 1701 Ammeter a separate set of 3-way binding posts is provided for each range.

All 1700-series standards are temperature-compensated for operation from 15°C. to 35°C.

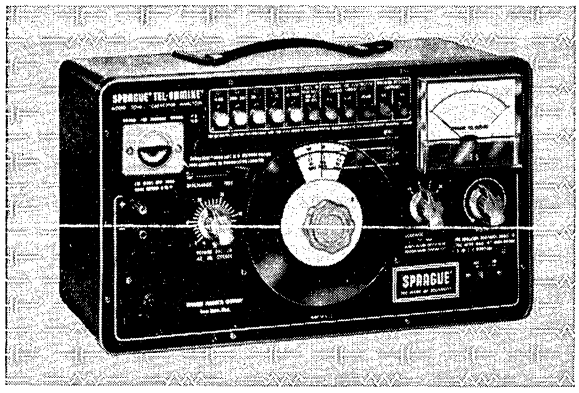
TO-6 TEL-OHMIKE® CAPACITOR ANALYZER



The TO-6 TEL-OHMIKE capacitor analyzer is a must for checking all capacitors. It is a moderately priced instrument with laboratory quality and accuracy—the highest accuracy of any instrument of its type available to the service trade!

- **LEAKAGE CURRENT** of electrolytics measured directly on meter. Four ranges; .06, .6, 6, and 60mA. Three ranges of DC voltage (continuously variable within each range) permit testing capacitors at exact rated voltage up to 600 volts.
- **POWER FACTOR** of electrolytics, up to 50% measured by Wien Bridge.
- **METER PROTECTOR** of solid-state design allows severe accidental over-loads without burn-outs.
- **MAGIC-EYE TUBE** simplifies bridge balancing for capacitance and power factor measurements. High gain amplifier provides greatly improved sensitivity.
- **PUSH-BUTTONS** color-keyed for instant range selection.
- **MODERN CASE:** Silver-grey hammertone finish, panel is charcoal grey with highly contrasting white designations. Measures 8⅞" high, 14⅝" wide, 6⅛" deep. Weight only 13 pounds.

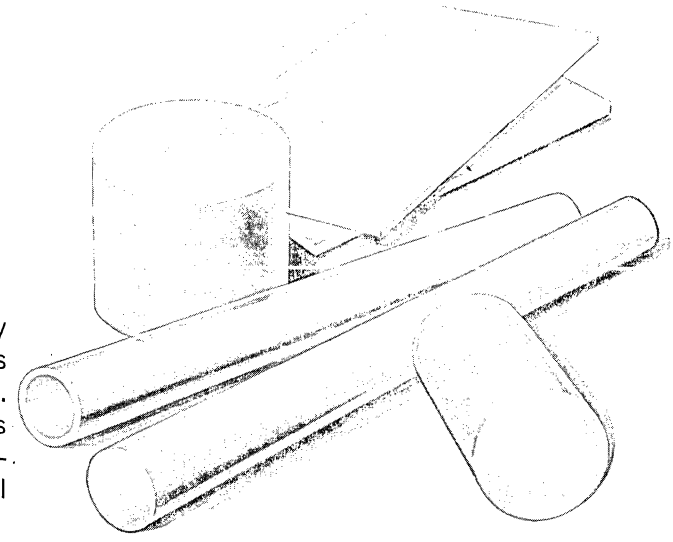
JB® Polystyrene

ROD TUBING SHEET



For radio and electronic applications, because of its very low loss factor at ultra high frequencies, Polystyrene is the ideal material for insulators, coil forms, shields, etc. It has excellent arc resistance, is non-tracking and has splendid insulating properties. Because its water absorption is practically zero it has excellent dimensional stability.

A-C OPERATION — Standard SLO-SYN Synchronous/Stepping Motors are permanent magnet a-c motors having extremely rapid starting, stopping and reversing characteristics and a slow basic shaft speed of 72 rpm synchronous with a line frequency of 60 hertz. Three-lead types need only a single-pole, three-position switch for complete forward, reverse and "off" control. No excessive inrush current when energized because starting and operating current are nearly identical. Can be completely stalled without overheating and with no harmful effects on components. Starts or stops in less than 5° of shaft rotation; no need for mechanical or electrical braking. When used with an auxiliary high speed motor, the SLO-SYN motor can remain coupled to the load and safely overdriven. Phase shifting resistor and capacitor must be used when operating from a single-phase source but not from two-phase. All standard motors are rated for continuous duty at maximum ambient temperature of 40°C. Types SS150 and SS152 use Class A insulation; all others have Class B.

D-C STEPPING — When used for phase-switched d-c stepping, the motors can be connected to provide either 100 or 200 steps per revolution. Accuracy of the steps is ±.09° noncumulative. Three-lead types require a center-tapped d-c supply and single-pole, double-throw switching; four-lead types require a single-ended power supply and single pole, double-throw switching. Bifilar motors can also be used with transistorized switching circuits. With a suitable control potentiometer instead of switches, a SLO-SYN motor can be made to rotate steplessly, permitting extremely accurate positioning. All motors have lubricated-for-life bearings.

PRECISION STEPPING

For phase-switched d-c stepping, types HS25, HS50, HS50D and HS50L make 200 steps per shaft revolution. Each 1.8° step is accurate within ±3% (.06°) noncumulative. May be operated at speeds greater than 500 steps per second if accelerating and decelerating circuits are used. With proper circuitry, the motors may be operated at speeds of 1000 steps per second or higher without missing any steps.

200 RPM

Types TS25, TS50 and TS52 are similar to standard models but operate at synchronous speeds of 200 rpm and take 36 or 72 steps per revolution when used for d-c stepping.

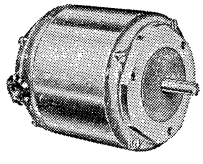
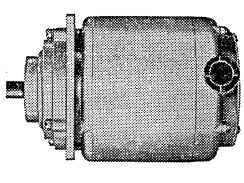
BIFILAR

Used for d-c stepping where use of push-pull circuitry and center-tapped power supply is not possible or where increased torque at high stepping speeds is required.



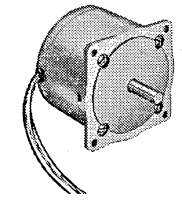
SPECIAL ENVIRONMENT

High Vacuum types for vacuums to 10^{-6} Torr; High Temperature types for temperatures to 130°C; High Radiation types withstand dosage of 3,000 megarads. All available from 50 to 1800 oz-in; High Vacuum 25 oz-in also.



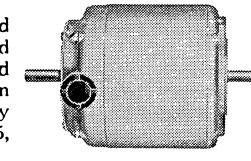
PLANETARY GEAR

Basic 50 and 150 oz-in types and type X250 available with planetary gear assemblies in speeds of 16.6, 3.32, 0.665, 0.133 or 0.027 rpm; 16.6 rpm available in other 250 and on 400 oz-in types.



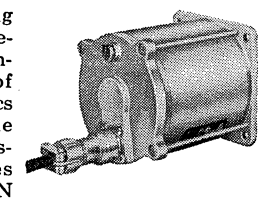
FOUR-LEAD

Designed for d-c stepping to provide the flexibility needed for use with equipment requiring isolated windings with no common connection.



DOUBLE END

Three-lead, bifilar and four-lead types with output shaft at each end of motor available in all listed torque ratings. 50, 150 and 250 oz-in types available also with planetary gear assemblies in 16.6, 3.32, 0.665, 0.133 or 0.027 rpm speeds.



VISCOUS DAMPED

Type HS50D precision stepping motor has a unique fluid system resulting in a step function approaching critical damping. Speed of response and running characteristics are essentially unaffected by the silicone viscous damping fluid. Possesses characteristics of types described under PRECISION STEPPING on facing page.

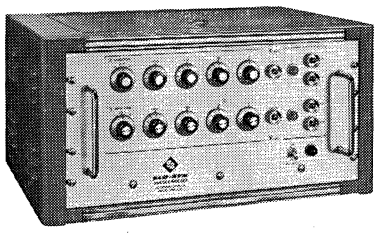
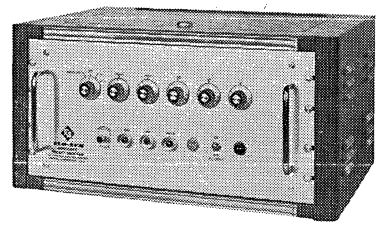
SLO-SYN® *Preset Indexers*



TWO-AXIS
TYPE 2SP1800-4

SINGLE-AXIS
TYPE SP1800B-4

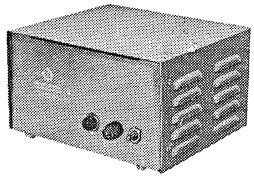


ABSOLUTE
TYPE SA1800-5

Used to control indexing of SLO-SYN bifilar motors. The index angle, or position, can be preset by dial setting on the control panel the number of 1.8° steps to be driven. Have provision for actuating any external equipment needed to perform related operations. Index, jog and free run can be initiated manually from the control panel or from an external switch. Can be made to cycle automatically with proper external switching. Single- and two-axis models are available with counting ranges to 99,999 steps. Two-axis models provide independent control of two SLO-SYN motors. Speed adjustable from 4 steps/second up to maximum possible with motor used. Optional backlash take-up circuit.

ABSOLUTE PRESET INDEXERS permit either absolute or incremental positioning modes. In the absolute positioning mode, the number set on the controls determines the final position of the motor relative to the starting, or "zero" point. When incremental positioning is used, the motor will move the preselected number of steps each time the INDEX button is pressed. Optional backlash take-up circuit.

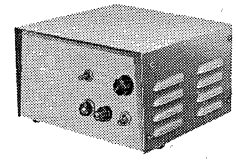
SLO-SYN® *Translator*



TYPE ST1800B

Pulse-to-step converter designed for use with appropriate bifilar SLO-SYN motors converted for incremental stepping. Convert low level signal pulses or square waves into the correct switching sequence needed to step a SLO-SYN motor at 200 steps/revolution (1.8° per step). Input is 105-125 volts a-c, 1 ampere. Signal input impedance is 500 ohms. Used for programmed positioning, indexing and indicating operations.

SLO-SYN® *Adjustable Speed Drive*



TYPE ST1800BV

Essentially, SLO-SYN Adjustable Speed Drive type ST1800BV is a translator which includes a built-in oscillator to supply the triggering signals. Oscillator frequency can be adjusted to vary the speed from 4 steps/second up to the maximum permissible with the motor used. Direction of rotation can be controlled either from the front panel or from a remotely located switch.

SLO-SYN® *Translator Module*
